

New millennium,

New positioning,

New strategy,

New products,

New Benefon.

Year 1999 in brief

FEBRUARY 2000

Novomeridian Oy and Benefon to cooperate in fleet and staff management systems (24.2.)

Benefon to set up new business unit, Benefon Wireless Solutions (23.2.)

Benefon introduces a new GSM+GPS professional telematics phone, Benefon Locus (23.2.)

JANUARY 2000

Benefon introduces the innovative Benefon Q – a GSM phone with dual-mode WAP + HTML functionality (31.1.)

DECEMBER 1999

Benefon licenses Microsoft[®] Mobile Explorer[™] to bring WAP and HTML based services and content to mobile phones (20.12.)

OCTOBER 1999

Vaasan Läänin Puhelin and Benefon have signed a major supply agreement for the innovative Dual SIM verson of Benefon Twin (19.10.)

Benefon to join Hewlett-Packard's Mobile E-Services Bazaar (11.10.)

Benefon, Arboreal and Geodata introduce the first mobile map service in the world at Telecom 99 (8.10.)

Suunto and Benefon agreed to cooperate in marketing and development of products for personal navigation (8.10.)

Benefon introduces world's first GSM+GPS personal navigation phone, Benefon Esc! (8.10.)

Benefon introduces new GSM dual band phone, Benefon Twin (6.10.)

SEPTEMBER 1999

The EU "MORE – Mobile Rescue Phone" project entering tryout (30.9.)

Benefon supports the novel GSM network locationing by Radiolinja (29.9.)

Benefon supports emerging GSM 400 cellular standard (3.9.)

JULY 1999

Benefon announces the new NMT 450i handset, Benefon Dragon (2.7.)

MARCH 1999

Benefon introduces "MORE – Mobile Rescue Phone" project at CeBIT (18.3.)

President's Letter

Playing a succesful catch-up game in a fast growing market is not one of the easiest things in business, especially not for a relatively small company. It requires high level of determination and dedication together with plenty of business savvy, financial resources and, sometimes, a long time span. And a little bit of luck certainly helps.

When Benefon started the basic GSM technology and products development program seven years ago in spring 1993, we knew it would be a hell of a job for our fledgling firm. The first few years were quite discouraging as the first two products with lots of attached hopes did not succeed in the market where the state-of-the-art product technology seemed to escape us like the distant galaxies of our universe.

But, with cranked-up efforts and fast upward bending learning curve, the third product Benefon iO, even with the employed single-band technology with certain limitations, turned out to be a highly performing and well-balanced product that won the trust and even affection by lots of customers. This re-enforced our belief that there are no reasons why we could not create world class products also for the GSM market, as we had done for the NMT 450 market from the very beginning.

In parallel with the crash project to create and launch Benefon iO, the program for next generation product platform was started and organized. Everybody in the Company understood its critical importance and gave it a maximum support. The challenge we faced was amplified many fold with the suddenly encountered strong turbulence in the bread-and-butter NMT 450 business in autumn 1998 due to the Russian finance crisis which took the bottom off our basic profitability. In that situation all we could do was to believe that with the new product program we can make it in the GSM market and reach a new profitable business balance. In those days it was of utmost importance to have the very solid financial situation that we had been able to build during several preceding highly profitable years. This gave us a concrete chance to ride over the storm, and realize the now emerging new product range of innovative wireless communication instruments for mobile people.

The luck element came in form of an opportunity offered to us in late 1994 to participate an EU project MORE – Mobile Rescue Phone. The object of this project was to research technical possibilities and draft and test possible solutions in order to eventually realize a novel European personal security and rescue system based on a customized GSM/GPS terminal. The MORE project sensitized us at an early stage to the possibilities of locationing and personal navigation field in broader terms, and this eventually led us to the decision to conceptualize and realize a completely new product category starting with the novel GSM/GPS-instruments Benefon Esc! and Benefon Locus.

With the miniature mobile Internet terminal Benefon Q, our new GSM product range now covers the red-hot business areas of mobile Internet, location based services and personal navigation with huge aggregate exploitable business potential in coming few years. This will offer Benefon a unique chance to ride a strong growth wave for some time to come and reach a new level of volume and profits. It is clear that it will not be an easy ride, that we will face lots of problems needing new solutions. But, based on our track record of facing and resolving difficulties, there is a reason to believe that we can make it and that it will be an exhilarating high seas sailing experience for those on board.

Jorma U. Nieminen

Jorma Nieminen President

Review by the Chairman of the Board

In 1999, Benefon went through a major change in its operations. Our company had long been known as a manufacturer of NMT phones with GSM phones as a sideline. Today, a majority of Benefon's product range consists of innovative GSM handsets, backed up by new NMT 450's.

For a small company, an almost complete overhaul of the product range is a huge challenge. It is commonly held that development of new GSM phones is not even possible without ten-digit investments. Benefon, however, has proved this view wrong and succeeded in launching several highly innovative products to accompany our new core product, the dual-band Benefon Twin. With slots for two SIM cards, this model will have a considerable competitive edge in mobile networks. Benefon Esc!, a combined phone and GPS device, will be an important tool for a wide range of users, in both professional and recreational contexts. Our latest release, the amazingly small Benefon Q, is one of the first WAP/Internet phones. In short, we have been releasing new products at a rate that would make any of the biggest manufacturers in the business proud.

Our next challenge is to make our products available to as many customers as possible and bring maximum added value to users.

This kind of overhaul is hardly feasible without the commitment and team spirit of all our staff. Every one of us has worked very hard to achieve our targets and even surpassed them in some cases. I feel sure that many of us find great satisfaction in achieving these results and have faith and confidence in our future work as well. The effort of past year has demanded a great deal from the entire team and will continue to do so, particularly as we have been told over and over again by a number of critics in the field that we are too small a company to make it in this race. At the end of the day, however, it will be our will to succeed that will bring results, while pessimism will not.

For shareholders, the past few years have been hard. No dividend has been paid and share prices have slipped back considerably. It has therefore been a great pleasure to see the upward trend which started last autumn and signaled the faith of many investors in Benefon's profitability. In this respect, the year 2000 is looking much brighter, as we can now expect to see the results of our hard work.

Raimo Voipio Chairman of the Board of Directors

Strengthening GSM Market

Tomi Raita Director, Sales and Marketing In 1999, marketing continued to focus on GSM systems, with a global increase in the number of subscribers. A significant phenomenon was the arrival of new GSM 1800 operators onto the market. Also, the number of new GSM 1900 subscribers increased in the Americas. It should be safe to assume that GSM systems will remain the basic service for mobile phones for many years to come.

Last year, network operators introduced a number of value-added services for their GSM systems. The most interesting of these was GPS, which enables provision of tailored GPS positioning services based on subscribers' locations, and "mobile payment systems" for wireless e-commerce.

For Benefon, 1999 was a year of a clear shift towards the manufacture of GSM phones. At the beginning of the year, we launched Benefon iO, a GSM 900 phone which was the first in the world to employ the T9[®] text input system, reducing the time for writing text messages to a third. It was hardly a surprise, then, that Benefon iO was very well received both on the Finnish market and abroad. In the autumn, we released a new GSM product family which consisted of the dual-band Benefon Twin GSM 900/1800 and the Benefon Esc! personal navigation phone with an integrated GPS satellite receiver. The economic impact of these products will be carried over to the year 2000 and strengthen Benefon's market position considerably.

The NMT 450 market remained stable in 1999, with most of the export going to Eastern Europe. The Russian market recovered from its 1998 crisis and new export deliveries were soon underway. Our market position as a NMT 450 supplier was strengthened, with only a slight disturbance in production caused by a shortage of component supply at the end of the year. In the autumn, we released a new NMT 450 product, the Benefon Dragon, which was very well received by the market. The Benefon Dragon supports all the latest NMT 450 system functions such as short-message services and voice privacy. It is also the world's smallest full-power 1.5 W handset.

The NMT 450 product line was pruned and updated by discontinuing the Benefon Forte, the Benefon Sigma and other older models. As far as we know, the Benefon Forte had a longer life than any other mobile phone model in the world, and the production line ran for eleven years. Development of new NMT 450 phones will continue in 2000 as well. Benefon also took an active part in developing NMT 450 specifications in various working groups and other forums. We are also keeping a close eye on the drafting of the new GSM 400 standard and have expressed our support for the standard as a possible alternative to other digital systems. Development of a Benefon GSM 400 phone will depend on the market outlook and the required infrastructure.

The sales volume increased considerably from the previous year but was slowed during the second half of the year by a shortage of component supplies. Furthermore, overall profitability suffered from a downturn in market prices. The components supply situation improved significantly at the turn of the year and similar shortages that could disturb production are not envisaged in the near future.

Benefon is launching a completely new product line in 2000, which is expected to bring major growth in sales volumes.

During the year, Benefon attended several international trade fairs such as CeBIT (Hanover), Svyaz (Moscow), Europe Telecom 99 (Geneva), Simo (Madrid) and Sircom (Paris). We also took part in several mobile telecommunications seminars and various local trade fairs.

Tomi Raita

Benefon Twin. Twice as good a GSM: 900/1800 Dual Band, optionally two SIM-card holders, and twin-colour case with user-changeable display masks.

Benefon Dragon. The smallest fullpower NMT 450 phone in the world.

Wireless Communication Instruments

For Contemporary Nomads and other inhabitants of the Mobile Internet Era

Jukka Nieminen Director, Product Marketing 1999 saw a complete reorientation and refocusing of Benefon's positioning, products and strategy.

An internal revolution of novel ideas and innovation took place. Old paradigms were questioned, customer and consumer preferences were explored with an open mind, new technologies were studied and applied aggressively. The New Benefon is innovative, agile and very sensitive to our masters: the marketplace, the customer, the consumer.

The New Benefon is also very conservative. We are more than ever embracing the tested Benefon virtues: respect of individuality, uncompromised performance and professional quality of our wireless instruments, and stylish, understated Finnish design. (The last one we actually renamed New Finnish design, just to be sure of some rethinking there, too.)

And the bottom line? A completely new portfolio of products and businesses, targeted at specialty markets as well as some high-quality segments of the mobile phone market. A new business model, focusing Benefon to the wireless instruments bit, and engaging best-in-class partners to contribute other bits in the value network, to jointly provide great whole products and services.

Some highlights of the new product range, rolling out during the winter and the summer, to illustrate the point:

• Benefon Esc! personal navigation phone is an iconic product. Compact survival kit of the contemporary nomad. Certainly, it is a water-resistant dual-band GSM phone, a twelve-channel GPS navigator, personal organiser and an alarm clock and all that other Benefon stuff. However, the most interesting aspect about Benefon Esc! is its Internet-based Mobile Map Service, developed jointly with Geodata and Arboreal. This service not only provides the user with European-wide selection of road maps, city maps and even hiking maps and navigational charts, but also with other practical information about addresses, routes, points of interest and more. True to its outdoor-loving character, Benefon Esc! is distributed also through Suunto, the global leader in outdoor information systems.

 Benefon Q is a personal, miniature wireless communication centre, powered by Microsoft[®] Mobile Explorer[™] WAP + HTML browser and Internet e-mail client. This is the ideal device for mobile professionals and quality-concious individuals, a true multipurpose tool for today's information jungle, in a very wearable size. The longer-term significance of Benefon Q is that it is our first product using Microsoft[®]'s standardsbased platform for Mobile Internet, the backbone of the now emerging mobile information society.

• Benefon Twin is a small and elegant, yet complete GSM dual-band phone, with Benefon quality and performance, and many unique extras like the twin-colour system. It supports quick GSM data, and – like all Benefon GSM products – locationbased services. It is even available with an optional second SIM-card slot and – like all Benefon products – an optional high-gain cross-country antenna for extreme coverage. • Benefon Dragon is simply the best NMT 450 phone available. It is the smallest NMT 450 phone with full power and performance. Benefon also continues to design new NMT 450 phones, to ensure that network operators have a source for modern, high-quality handsets for years to come.

Looking ahead, the main focuses for Benefon in the year 2000 is to improve operational capability as well as distribution and brand awareness in selected markets, to fully leverage the strong product range.

Looking further ahead, there are major challenges again waiting. The pace of market and technology development is breathtaking, amidst the turbulence of what is propably the biggest convergence of industries ever. Global competition is harsh. How to prevail and prosper?

Benefon staff has shown tremendeous fighting spirit in achieving feats declared categorically unobtainable to us by the industry know-it-alls. It is vital to preserve this spirit of commitment, innovation and obsession about customer value, also now when the businesses are growing fast.

Nurturing and recruiting top talent is crucial. In our highly complex and dynamic business environment, only a crack organisation can achieve its goals with determination.

Most important is to focus development activities in those areas where Benefon can sustain competitive advantage through products delivering unique value, contributing to the way we run our businesses and to the way we live our lives.

The Benefon products and associated services highlighted above are doing exactly this, by freeing us from many of the constraints of a specific time and place. Much more will become possible to do, with a little help from evolving technologies in wireless access, mobile internet and personal navigation. We at Benefon will be there to do our bit of innovation.

Benefon Q. The perfect Wireless Communication Centre powered by Microsoft[®] Mobile Explorer[™] WAP + HTML browser, weight only 89 grams.

Benefon Esc! A compact survival kit of the contemporary nomad: GSM Dual Band phone, twelve-channel GPS navigator and Internetbased Mobile Map Service, surface and quality of steel.

Board of Directors' Report on the Fiscal Year 1999

Year 1999 signified an important turning point in the history of Benefon, as the Company received general recognition as a developer and manufacturer of innovative wireless communication instruments utilizing GSM networks. Though the net sales were one and a half percent below the sales of the previous year and the operating loss was heavy, the share price almost doubled over the year and almost tripled during the last quarter. The sharp appreciation of the share followed several announcements of new innovative GSM products that took place in the final quarter. These announcements are a concrete proof that the proportionally massive long-term product development program of the Company begins to bear fruit.

In October, at the Telecom 1999 Show in Geneva, the Company introduced a small dual band GSM phone Benefon Twin together with Benefon Esc!, the world's first GSM/GPS phone for personal navigation. Soon after this came Benefon Twin Dual SIM, the first GSM phone for two SIM cards that was developed for a regional DCS operator Vaasan Läänin Puhelin Oy in Western Finland. In December, the Company announced an agreement to integrate the Microsoft[®] Mobile Explorer[™], including a dual mode (WAP/HTML) microbrowser, into Benefon's first WAP phone unveiled in February 1, 2000, in Cannes.

With these newest products that received a loud applause in the market. Benefon is now one of the most interesting GSM manufacturers. The previous GSM phone Benefon iO, brought to the market in January 1999 and retired from production less than a year later at the end of last year, made the GSM sales to approach the NMT 450 sales for the first time. The new products, the first of which will become available in this first quarter of 2000, are believed to lift the sales to a level substantially higher than that of last year.

The most central contemporary topics of the still growing GSM market are mobile Internet connection and location based services, both of which are forecast to grow very fast in the next few years. Benefon is well positioned regarding these new GSM applications and in the development of equipment and solutions for location based services market Benefon is a pioneering company worldwide. Together with up-to-date GSM technology and the new Finnish high design in the products, this position gives the Company excellent opportunities in the quickly transforming GSM markets.

The NMT 450 markets in Russia and elsewhere in Eastern Europe have recovered from the jolt caused by the Russian financial crisis in autumn 1998. The market position of the Company is well recognized in these markets, and the new small NMT 450 phone Benefon Dragon has bolstered it further. During 1999, several old products were retired from production and, at the end of the year, only Benefon Spica and Titan were left in the product range in addition to Benefon Dragon. The order stock for NMT 450 products grew sharply in the second half of 1999 but it could not be exploited to the full due to serious supply problems by two parts vendors. Both problems, however, were solved by the end of the year, and the NMT 450 sales have been brisk right from the beginning of this year.

From left to right: Raimo Voipio, Anders Svartbäck, Jorma J. Nieminen, Pekka Aura and Jorma U. Nieminen

To help complete and exploit the new GSM product range, Benefon has entered into a number of cooperation agreements. Besides the mentioned recent agreement with Microsoft[®] and the 1998 agreement with Tegic Communications to integrate the predictive text input system T9[™] into Benefon products, the Company initiated last year cooperation with Geodata and Arboreal to develop map services for Benefon Esc!, with Suunto Oyj regarding distribution and continuing development of personal navigation products and with Radiolinja. Yomimedia, Modelsoft and Hewlett Packard to realize and pilot GSM network positioning solutions. Benefon has also been an active participant in the national research project "Personal Navigation" led by the State Research Center.

Of longer standing co-operation activities one should not forget the EU TIDE project MORE, started in January 1995 and to be concluded in this March, which has created the technical and mental preparedness for Benefon to address readily and effectively the now "hot" areas of personal navigation and location based services. Benefon has in Members of Board of Directors:

Raimo Voipio MSEE Benefon Oyi's board member since 1999

Anders Svartbäck M.B.A Fondita Rahastoyhtiö Oy, Partner Benefon Oyj's board member since 1994

Jorma J. Nieminen Managing Director of Finnfoam Oy Benefon Oyj's board member since 1993

Pekka Aura Engineer Managing Director of Satel Oy Benefon Oyj's board member since 1993

Jorma U. Nieminen MSEE Founder and President of Benefon Oyj Board member since 1988 recent years also, together with Ericsson and Nokia, been actively participating in the NMT 450 and GSM 400 standards development.

In spite of the heavy financial losses of 1998 and 1999, the Company has been increasing the product development expenditure. This has been made possible by drawing on the large cash and capital reserves accumulated during several strong years of mid 1990's. The main emphasis in product development has for long been on the GSM products but, to strengthen its established good NMT 450 market position, the Company has continued to develop also NMT 450 products. The Benefon Dragon, brought to the market in last autumn, has fulfilled the expectations and it has become the leading NMT 450 product. Altogether, the R&D expenditures in 1999 amounted to a record level of 21 percent of the net sales.

The clean-up of the product range that was started in 1998 continued last year so that, at the end of the year, of the old products only the NMT 450 phones Benefon Spica and Titan remained in production after the NMT 450 hand-portable Benefon Sigma and Company's first product Benefon Forte NMT 450 car phone from 1989 were retired in addition to the already mentioned single band GSM phone Benefon iO and its predecessor Benefon Vega. In connection with this product clean-up, the inventory was cleared of all non-current items related with these retired products, together with their specific accessories and spare parts stock, and a corresponding write-off was implemented in the books. After these measures, the inventory is now substantially clean of non-current items.

The planned write-off schedule of the capitalized prior-year basic GSM technology development expenditure was continued. The final 3 MFIM amount, left over after last year's 6 MFIM write-off, will be written off during the first half of 2000, after which there are no capitalized R&D expenses in the books. The program to review and pre-empt the Y2K problem in various systems of the Company was completed succesfully and the Millennium shift did not cause problems in the operations of the Company.

In 1999, the number of personnel grew three percent and was, on average, 296.

The shipment volume in 1999 grew 44 percent from 1998 but, due to lower average prices, the net sales were reduced by one and a half percent and amounted to

233 MFIM, of which the share of exports was 89 percent. As the expenditure level was kept high for future growth and, as described, there were the mentioned write-offs of old R&D-expenses and of non-current material items, the 46 MFIM operating loss in 1998 grew into 71 MFIM in 1999. The loss before appropriations and taxes was 73 MFIM compared with the same of about 44 MFIM in 1998.

As a result of the loss, the shareholders' equity with appropriations fell from 148 MFIM to 75 MFIM at the year's end, of which the share of non-restricted shareholders' equity was 43 MFIM. Simultaneously, the total liabilities rose from 26 MFIM to 75 MFIM, so that the Company's equity ratio fell from 84 percent to 49 percent. Cash reserves at the end of the year stood at 27 MFIM, down from 72 MFIM a year before.

According to the outlook into the first half of this year the sales will rise rapidly and will bind up substantial additional operating capital even though the operating result seems to turn clearly positive. In order to finance the needed additional operating capital and to secure sufficient cash margins, the Company has agreed on a one-year credit facility amounting to 70 MFIM.

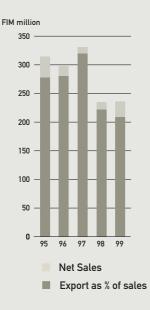

In order to maintain as large a margin as possible in the Company's finance and capital structure during the on-going business development program to build new growth platform for the Company, the Board has decided to propose to the Shareholders' Meeting that no dividend would be distributed for the fiscal year 1999. However, the intention is to preserve the Company's long standing dividend policy, according to which a reasonable part not less than 30 percent of the annual income should be distributed as dividends to the shareholders if there are no particular justified reasons to deviate from this policy.

The Chairman of the Board changed in 1999. The Company's long-standing Chairman Mr. Jukka Helkama served as the Chairman until April 23, 1999, whereafter he was succeeded by Mr. Raimo Voipio. The rest of the Board, Mr. Jorma J. Nieminen, Mr. Anders Svartbäck, Mr. Pekka Aura and Mr. Jorma U. Nieminen, remained unchanged.

Benefon's S-share is quoted on the Helsinki Stock Exchange's I-list. The Company's parent company is Halyard Oy.

Notes to the Financial Statements

The Company's parent company is Halyard Oy, place of registered office Salo, Finland.

Copies of the consolidated financial statements are available at Benefon Oyj's head-office, at street address Meriniitynkatu 11, 24100 Salo, Finland.

SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Fixed assets and depreciation:

Fixed assets are stated at cost. The acquisition cost of fixed assets items includes items not yet fully depreciated. Depreciation is calculated on a straight-line basis so as to writeoff carring value of fixed assets over their expected useful lives.

Inventories:

The cost of inventories include variable cost only. Inventories are valued at lower of cost and net realizable value. Cost is determined on a first in – first out (FIFO) basis.

Foreign currencies:

Receivable and payable balances outstanding at year end are translated to Finnish Markka using the year end exchange rate of the Bank of Finland. Currency options and forward contracts that are used for hedging of currency risks are valued at the market value (options) and using the year end exchange rates (forward contracts).

Development costs:

Development costs incurred during 1999 have been charged to income. The capitalized development expenses relate to the prior-year basic GSM-technology development.

Deferred taxes:

Deferred taxes have not been accounted for in the financial statements. The tax loss carry forward resulting from the loss for the the financial years 1998 and 1999 corresponds to some FIM 30 840 000 of deferred tax assets.

13. BOND LOAN WITH STOCK OPTIONS

During 1997 a bond loan with stock options was issued to be subscribed by all permanent personnel and members of the

Board of Directors of the Company and the Managing Director of the parent company. The loan subscription period was 26.5. - 6.6.1997. The loan amount was FIM 105 000 and its maturity was two years. The loan paid no interest.

The stock options associated with the bond loan entitle to the subscription of an aggregate of 350 000 S-shares of the Company. These shares represent 2% of the total number of votes carried by the Company's shares. The subscription price of one share is FIM 125 (EUR 21.02) subtracted by the per share dividends paid after June 1997. The share subscription period for the first half of the stock options began on 1.4.1999, and for the second half it begins on 1.4.2001. The subscription period ends on 1.4.2003 for all stock options.

New shares shall entitle to dividend for the financial year in which the subscription takes place.

written		20 000		-30

Underlying value include also forward contracts which have been closed off. Currency options written are used in connection with purchased currency options.

The Company is exposed to foreign exchange risk arising from sales and purchases in foreign currencies. In accordance with the established company policy Benefon's aim is to hedge all significant currency risks. Currency position is monitored constantly and hedging is carried out the basis of the Company's net currency position. Hedging is done primarily with forward contracts and currency option contracts.

The Company is exposed to interest rate risk mainly through changes in the interest rate level of the financial investments. Investments are mainly done in short term and low-risk instruments with high liquidity. The Company hedges its interest rate exposure by using interest rate forward contracts.

Auditors's Report

TO THE SHAREHOLDERS OF BENEFON OYJ

We have audited the accounting records, the financial statements and the corporate governance of Benefon Oyj for the financial year 1999. The financial statements, which include the report of the Board of Directors, the income statement, balance sheet and notes to the financial statements, have been prepared by the Board of Directors and the President. Based on our audit we express an opinion on these financial statements and the corporate governance.

We have conducted our audit in accordance with the Finnish Standards on Auditing. Those standards require that we perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used as well as evaluating the overall financial statement presentation. The purpose of our audit of corporate governance is to examine that the members of the Board of Directors and the President have legally complied with the rules of the Companies Act.

In our opinion the financial statements showing loss of FIM 68 039 655.06 have been prepared in accordance with the Accounting Act and other rules and regulations governing the preparation of financial statements. The financial statements give a true and fair view, as defined in the Accounting Act, of the result of operations as well as the financial posotion of the company. We recommend that the financial statements be adopted and the members of the Board of Directors and the President be discharged from liability for the financial year audited by us. The proposal by the Board of Directors regarding the handling of the loss for the year is in compliance with the Company Act.
