# Information for Shareholders and Investors

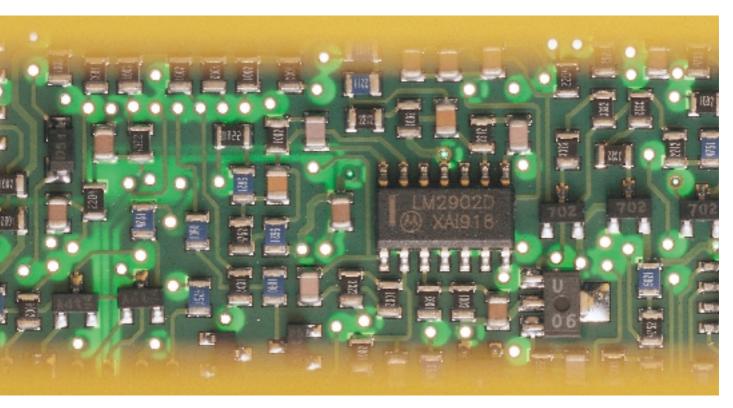

The Annual General Meeting of Efore Plc will be held on Thursday, March 16, 2000 at 5.30 pm at the following address: Diana Auditorium, Erottajankatu

5, 00130 Helsinki, Finland. Shareholders wishing to attend must register with Efore by 4.00 pm on Friday, March 10, 2000:

Efore Plc PO Box 61 (Piispanportti 12 A), FIN-02211 Espoo, Finland tel. +358 9 478 466 fax +358 9 478 46500 E-mail: susanna.laine@efore.fi Efore will publish three Interim Reports in 2000November - Januaryin week beginning March 13February - Aprilin week beginning June 12May - Julyin week beginning September 11

Efore's Annual and Interim Reports, Stock Exchange Bulletins and Press Releases are published in Finnish and English, and can also be viewed on the Group's homepage: www.efore.com

Efore has production lines for surface-mount and through-hole components as well as IMS circuit board technology.

## **Efore Group**

- designs, markets and manufactures power electronics for the world's leading telecommunications and industrial companies
- parent company is Efore Plc, established in 1975
- customers are mostly international companies in the telecommunications, industrial automation and medical electronics sectors
- products are custom-designed power supplies, rectifier systems and inverters which convert electricity and ensure a disturbance-free power supply
- Group turnover in 1999 was MFIM 289.9
- the Group employed an average of 491 people in 1999
- series A shares in Efore PIc are quoted on the Investors' List (I list) of Helsinki Exchanges
- in Finland, the Group has operations at Espoo, Saarijärvi, Vantaa, Tampere and Jyväskylä
- the Group has subsidiaries in Sweden, the United Kingdom, the United States (Texas) and China, and an associated company in Germany

#### **Turnover by Customer Sector**

#### Group Exports and Turnover outside Finland (MFIM 119.2 or 41 % of turnover)

## **CEO's Review**

#### Demand picks up, production more efficient

Efore continued to develop its operations concentrating on product development and manufacture of custom-designed power supplies and rectifier systems, as set out in its chosen strategy. Characteristic of Efore's operations is a relatively high dependence on existing customers and demand for existing products as it requires about a year to develop new products and new customer relations.

Demand for products already in production was up on the previous year, the Group's invoicing for these orders showing an increase of 10.9 % (1998: 2.4 %). This followed the global growth rate in the power supply industry. Sales to many of Efore's customers were up, in part due to the healthy demand for two new products developed in 1998. Sales to the company's biggest customers varied considerably, with the total sales volume falling short of the results envisaged when the major product development and production technology projects were launched in 1998.

The level of orders for new projects remained fairly buoyant, although the key product development orders received the previous year did continue to take up most of Efore's product development capacity. Expectations remain high regarding the demand for products that are at the development stage. The product development programme for the year was the most extensive in Efore's history. Custom-designed projects are based on specific customer orders, which usually then lead to production.

The trend in the demand for rectifier systems was mixed, but in the final quarter there was significant growth in demand on Efore's selected export markets. The new Epos power system was launched during the financial year, and deliveries began. Nevertheless, the revival in demand was not sufficient to raise sales of rectifier systems to the level of the previous year.

#### **Organizational changes**

On April 1, 1999, a new operational management was established for the Group reporting directly to CEO of the parent company Efore Plc. The Group was divided into two Business Areas: Custom-designed Power Supplies and Power Systems. These Business Areas were divided into four Business Units, three of which concentrate on custom-designed power supply solutions, and the fourth on power systems.

At the same time, management of the Group's production,

product development and materials functions began reporting directly to the parent company's CEO. The General Managers of the subsidiary companies now also report to the CEO. Business support processes were combined under the direction of Deputy CEO Vesa Vihavainen, who is also responsible for the Power Systems Business Area and continues as General Manager of Muuntolaite Oy. Juhani Vasakari was appointed President of Efore (USA), Inc.

On October 1, the Group's Finnish product development functions were concentrated under Efore Power Design Oy. The aim was to simplify the organizational structure and to centralize management of product development resources.

#### Performance

The improvement in the result fell short of expectations, despite the more active demand. The result was further affected by major investments in new product development projects ordered by customers, the return on which will largely not materialize until volume production is achieved, and by investments in new production technology. Productivity in Efore's factories was raised during the year, and in January a cost-cutting programme was introduced. This enabled Efore to respond well to the declining price trend in the market.

The initially low utilization rate of the new production line brought on stream at the Saarijärvi plant in August 1998 had an adverse effect on the result. The utilization rate nonetheless improved during the year, as planned, and reached a satisfactory level during the summer.

At the US factory, the quality problem in the production process that emerged at the start of the spring led to additional costs and a loss in net income. Although the problem was swiftly investigated and the situation brought quickly under control, it took time to complete the reverification of the process. The situation was resolved in cooperation with the customer. Following the delay, the plant returned to its normal operating level in June.

### Strategy and operations at the US subsidiary

The main customer of Efore's US subsidiary during its initial phase was Nokia's Forth Worth base station plant. In summer 1998, with US demand failing to meet expectations, Efore (USA), Inc. began delivering to Europe. During spring 1999 the Group's production

strategy was reviewed, and the division of responsibilities between the US and Saarijärvi factories became product-based. This meant that a substantial proportion of the US production is now exported to Europe as part of Efore's global production concept.

Under this arrangement the US factory's utilization rate has been brought up to a reasonable level, enabling profitable operation with the present cost and customer structures. Local deliveries to Merlot Communications Inc. and Datex-Ohmeda Inc. have begun, and efforts to further expand the customer base are continuing.

Efore's US factory is an essential part of the Group's US marketing strategy. Along with Nokia and Ericsson, the US industry has a key role to play in developing technology for the information society, which means some of the most important growth potential for Efore in the future will be in the US markets.

#### Present financial year

The company was, in many respects, steered onto the right course during the year under review, and new products moved into production phase as expected. The export of power systems began to grow again, the customer base in the USA expanded, and productivity and cost efficiency were improved. The new financial year has got off to a record start, with invoicing in November and December totalling MFIM 67 (1998: MFIM 48), giving us good reason to assume that this financial year will be considerably more profitable than the last one.

Efore's new subsidiary in Suzhou, China, also creates a foundation for new growth. China is a growing market for power electronics, and many of our existing and potential global customers are already operating there and require their partners to have a local presence. Interesting market segments for rectifier systems have also been identified in China. In order to better control the risks, the strategy is to proceed one small step at a time. Product manufacture will rely on local subcontractors. The new subsidiary also supports Group procurement by acquiring inexpensive materials for the needs of the whole Group. Efore has already signed a framework agreement with an important international telecommunications company in China for delivery of power supplies. Manufacture of a trial series of power supplies is currently under way, and local delivery will begin during the first quarter of 2000. Efore's subsidiary is located in the city of Suzhou, about 100 kilometres inland from Shanghai. The company initially employed two people, and in the first quarter of 2000 it will employ ten people.

The year under review was a demanding one in many ways. May I warmly thank all our customers, personnel, shareholders and partners for their valued cooperation.

Berndt Schalin CEO Efore Plc

## **Custom-Designed Power Supplies**

9

Custom-designed power supplies is the biggest Business Area of Efore, with production operations at Saarijärvi and Vantaa in Finland, and in Texas in the United States. Turnover in this Business Area was MFIM 251.2 (1998: MFIM 218.2). The Business Area was reorganized in the spring and is now divided on the basis of customer groups into three Business Units. Within the power supplies industry, above average growth is expected in the demand for custom-designed solutions.

Characteristic of sales in this business in short-term is the unusually high dependence on the existing customers and demand for existing products, as it requires about a year to develop new products and new customer relations.

Close cooperation with the customer is essential at all stages, and the fashionable term 'customer relations management' describes very well one of the key operating principles long used by Efore. Indeed, Efore took part in a competition on this theme organized during the year by the Centre for Relationship Marketing and Service Management at the Swedish School of Economics and Business Administration in Helsinki and succeeded in gaining a place amongst the six finalists.

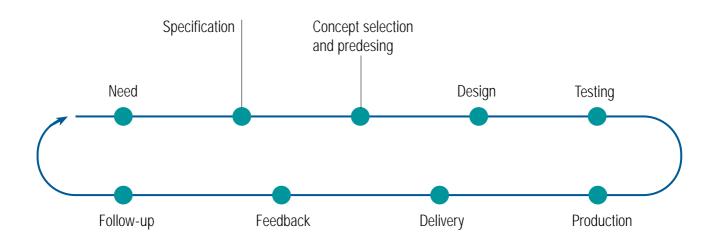

Demand for existing products and for new products transferred to production during the year showed an improvement over the previous year, with total invoicing for custom-designed power supplies up 15%. This increase was in line with the global rate of growth in the power supply industry.

Demand for new projects also remained buoyant, although the major product development orders received during the

Custom-designed power supply solutions accout for 80 % of the Group turnover.

previous financial year again committed most of our product development capacity. Expectations concerning the demand for products currently at the project stage are still high, and the product development programme for the year was the most extensive in Efore's history. Custom-designed projects are based on specific customer orders and usually then lead to volume production.

#### **Business in the United States**

Efore's subsidiary Efore (USA), Inc. concentrated entirely on custom-designed power supplies during the financial year. The product development order received from Merlot Communications Inc. at the end of the previous financial year led already to small-scale production, and the first local orders from the US factory of Datex-Ohmeda Inc. were received right at the end of the financial year. A major new customer for the Business Area is the industrial automation equipment producer Phoenix Contact GmbH & Co. in Germany, whose order was obtained through collaboration with our German associated company Power Innovation GmbH.

Cooperation with the global power supply manufacturer Lambda was reorganized during the year, as a result of Efore's focus on custom-designed applications. Efore decided to discontinue its distribution of Lambda's standard products in Finland and in some other market areas as of the start of September.

Growing demand helped improving the operating profit of the Business Area compared to the previous year, but its profitability still remained below the long-term goals.

Efore's laboratory specializes in power supplies. It has measuring equipment and tools for design verification, and performs type tests which are the basis for various approvals.

## **Power Systems**

The Group's Power Systems Business Area designs, markets and manufactures Epos and PoMo rectifier systems and other products connected with systems, mainly for telecommunications and industrial customers. Sales personnel for this Business Area are based at Espoo, Finland, and production is in nearby Vantaa. The Area's turnover for the year was MFIM 38.7 (1998: MFIM 43.3). 11

The drop in turnover was largely due to the reduced trade with Russia beginning in August 1998, as well as the declining price trend on the Finnish markets. Efore responded to this situation by improving the efficiency of its operations and by outsourcing various functions, e.g. part of the circuit board assembly for this Business Area was subcontracted to countries with lower labour costs.

Production of the new Epos system began during the year, and more substantial growth in sales is expected when the product family is completed in the early part of 2000.

The Power Systems Business Area also works closely with Efore's German associated company Power Innovation GmbH, acting as representative for Power Innovation's inverters and power systems in Finland, the Baltic countries and Russia. Power Innovation represents Efore's Power Systems in Germany.

Exports are growing again, and the main export markets targeted by Efore are Russia, the CIS countries, the Baltic countries and Greece. The export strategy is based on a network of representatives which was expanded last year. Exports grew especially in the last quarter of the year, resulting in a doubling of the production of PoMo 300 rectifier systems at the Vantaa plant.

A downturn in total sales and the pressure on prices meant that the result for the Business Area was below that of the previous year. The second half of the financial year, however, proved to be better than the first. In particular, the restructuring the Group's Vantaa plant improved the Business Area's performance.

Epos rectifier systems are designed to serve the needs of telecommunication and industrial customers.

# **Group Companies**

Berndt Schalin CEO Efore Group

#### **Efore Plc**

Efore Plc, the Group's parent company, focuses on custom-designed power supplies. Efore Plc also takes care of administration for the Group and for Efore's Finnish subsidiaries. The parent company employs personnel at the Group's operations in Espoo and Saarijärvi in Finland and at its Swedish operation. Parent company turnover was MFIM 200.0 (1998: MFIM 172.0), and at the close of the year it employed 327 (1998: 328) people.

#### **Muuntolaite Oy**

Muuntolaite Oy serves both Business Areas of the Group. It employs personnel at the Group's Espoo and Vantaa operations. The company's turnover amounted to MFIM 59.2 (1998: MFIM 67.6), and at the close of the year it employed 73 (1998: 103) people.

#### **Efore Power Design Oy**

In September, the name IL-Power Oy was changed to Efore Power Design Oy, and from the start of October the product development personnel of the Group's Finnish companies were transferred to the service of Efore Power Design. The purpose of the change was to simplify the organizational structure and to centralize the management of product development resources.

The company mainly sells product development capacity to the Group's different Business Units. The IL-Power team continues as an independent design unit within Efore Power Design Oy. The company employs product development personnel at the Group's Espoo, Saarijärvi, Vantaa, Jyväskylä and Tampere operations. At the close of the year Efore Power Design employed 45 (1998: 4) people.

### Efore (UK) Ltd.

Efore (UK) Ltd. focuses on custom-designed power supplies. The company is located in Farnham, west of London. As part of the Group's cost-cutting program, the product development carried out in the UK was transferred to Efore Power Design Oy in Finland. The company's turnover amounted to MFIM 20.6 (1998: MFIM 6.5), and at the close of the year it employed 3 (1998: 4) people.

#### Efore (USA), Inc.

Efore (USA), Inc. specializes in custom-designed power supplies. The company's turnover for the year was MFIM 33.9 (1998: MFIM 31.7), and at the close of the year it employed 44 (1998: 41) people.

#### Efore (Suzhou) Electronics Co., Ltd.

Efore (Suzhou) Electronics Co., Ltd. focuses on custom-designed power supplies and on procurement for the Efore Group. The company is located in the city of Suzhou, about 100 kilometres west of Shanghai. It began operations in November 1999.

#### **ASSOCIATED COMPANIES**

#### JES Logistics Ltd.

JES Logistics Ltd, operating in the United Kingdom, concentrated mainly on providing a service to its customer by keeping stocks of its shareholders' products for call-off type deliveries. Besides Efore, the company's other shareholders are Jyskän Metalli Oy and Scanfil Oy, each with a one-third share. The company performed successfully and all the shareholders managed to consolidate their customer relations. From the beginning of 2000 the customer started to manage buffer stocks itself using the same operating principle, and so the operations of JES Logistics Ltd. have since been discontinued.

#### **Power Innovation GmbH**

Power Innovation GmbH, in Germany, designs and manufactures power electronics, specializing in inverter technology. The new LavaLine inverter product family has been well received on the market, and the company's overall sales began to grow steadily during the latter part of the year. Power Innovation has also been largely responsible for establishing customer relations with Phoenix. The custom-designed power supply developed for Phoenix is to be manufactured at Efore's Saarijärvi factory in Finland. The total turnover of Power Innovation for the year was MDEM 3.3 (1998: MDEM 3.8), and at the close of the year the company employed 31 (1998: 32) people.

**Developments During the Financial Year** 

#### **Product Development**

Efore's technological and product development expertise in the power supply sector is the key to obtaining further contracts from existing customers and to gaining new customers and markets. The most extensive product development programme in Efore's history was started during the financial year.

On October 1, 1999, the Group's Finnish product development functions were transferred to Efore Power Design Oy, formerly IL-Power Oy. The purpose of the change was to simplify the organizational structure and to centralize management of product development resources.

Efore Power Design mainly sells product development capacity to the Group's different Business Units. The IL-Power team continues as an independent design unit within the renamed company. The company employs the product development personnel of the Group's Espoo, Saarijärvi, Vantaa, Jyväskylä and Tampere operations.

#### Treatment of product development expenditure in the financial statements

Efore's business model, in which a customer project includes both a product development stage and a subsequent production stage, leads to a situation in which substantial costs are generated before any returns. The product development stage often lasts more than 12 months, and the life cycle of the product is typically three to seven years, during which time most of the returns on the project are generated.

To ensure that the Group result and the balance sheet figures accurately reflect the company's true situation, the accounting practice has been amended such that some of the costs of large, individual product development projects, amounting to MFIM 4.4, are now capitalized in the balance sheet. This investment will be depreciated according to a project-specific depreciation plan, which means, on average, a depreciation period of five years. The depreciation is related to the trend in sales income for the product and the estimated time remaining of the product's life cycle. Product development costs amounting to MFIM 19.6 have been booked directly as expenditure for the past financial year.

#### **Cost Efficiency**

Once it became clear early in the year that despite the more active demand, the achievable total sales volume would still fall

short of the level envisaged when the major investments in product development and production technology were made in 1998, steps were taken to introduce a two-stage cost-cutting programme.

Cost-cutting measures were limited on account of the need to continue with all major product development projects ordered by customers and with the efforts to expand the US customer base. Both factors are essential parts of Efore's basic strategy in terms of medium-term growth and financial performance.

The main savings were achieved via the productivity project at the Saarijärvi factory, active procurement policy, reorganization at the Vantaa plant and outsourcing various functions. The measures included a reduction in personnel through natural turnover, early retirement, lay-offs and redundancies. The boost in production at Saarijärvi towards the end of the financial year did, however, lead to an increase in production personnel at the plant, mainly through employing temporary personnel.

#### **Production and investments**

Use of the new SMT production line acquired at the Saarijärvi factory in the previous year proceeded as planned. A satisfactory utilization rate for the line was achieved in the summer, after which its use has been in line with the targets set, mainly involving work in three shifts.

Group investment during the year totalled MFIM 11.1 (includes 4.4 MFIM capitalized product development expenditures) and was largely made on replacements and minor productivity improvement measures.

#### **Environmental management**

Progress with environmental matters at Efore Plc has been based on the international ISO 14001 standard, which is being applied to all activities of the Finnish companies in the Efore Group. Efore's environmental policy is built around three basic themes: compliance with legal and other provisions and requirements; continuous improvement of the level of environmental protection; and prevention of damage to the environment. To turn these into concrete measures, Efore has established environmental goals, objectives and programmes which will enable all its personnel to act in an environmentally sound manner and in accordance with the company's environmental policies.

In autumn 1998, Efore, together with eight of its subcon-

Automatic testing ensures the quality of Efore products.

tractors and two other companies, launched the Efeco project with the support of the Uusimaa and Central Finland Employment and Economic Development Centres. Under this project, an ISO 14001 environmental system will be established for all the participating companies. Efore's environmental system was pre-audited by the Finnish Standards Association in January 2000 and the full certification audit will be conducted in March 2000.

Thanks to waste management, the amount of landfill waste produced by the Saarijärvi plant was reduced by 35 % from last year, despite the doubling of production between 1997 and 1999. This was possible with the motivation and commitment of Efore's personnel and the environmental training given to every-one at the factory. Contact persons for environmental matters have been appointed for each function.

#### Personnel

The Group's personnel policy provides a framework for the continued professional and personal development of its personnel. The policy aims to promote the development and growth of the individual in line with the company's objectives. Efore supports personnel who are well motivated and have the desire and ability to develop their professional skills and to interact with others. The focus during the year was mainly on improving environmental awareness and knowledge of environmental matters and on improving language skills.

The attitude of Efore's personnel towards development of the company and the efficiency improvements during the year was positive. New developments in technology, as in other areas, were greeted with enthusiasm.

#### Developments following the Close of the Financial Year

Following an invitation for bids, the metal works at Efore's Vantaa factory was sold to Helsingin Levytyö Oy, which had earlier functioned as a reserve production facility for Muuntolaite Oy.

The operations of JES Logistics Ltd. became obsolete when the customer began to run an equivalent operation itself for all suppliers. For this reason the shareholders decided to discontinue the company's operations as of January 1, 2000.

In November, Efore's weak financial position led it to initiate negotiations with personnel over cost-cutting measures in the Group's Finnish companies, the outcome of which included a salary reduction package for the Saarijärvi production personnel and operational management team. Only a small number of redundancies was necessary, but natural turnover will become important in the future. These measures will allow Efore to maintain its ability to perform and to improve its competitiveness in relation to its Finnish competitors.

Following the close of the financial year a new subsidiary, Efore (Suzhou) Electronics Co., Ltd. was set up in China. The company will manage local customer relations and logistics, and will support Group's procurement function, acquiring local materials for the needs of the whole Group. At this stage, product manufacture will rely on local subcontractors.

In December, Muuntolaite Oy was granted an AQAP 110 quality certificate, making it possible to expand deliveries made to the military sector.

**Board of Director's Report** 

16

A significant increase in production volumes occurred during the year. This was not directly reflected in turnover, however, because rapid changes in production technology led to important design changes, aimed at reducing costs, to products already in production.

Group turnover for the year rose to MFIM 289.9 (1998: MFIM 261.5), a growth of 10.9 % over the previous year. Sales to major customers varied especially in the first six months, and the total sales volume still did not meet the level required for a good result.

The Group result for the year (November 1, 1998 - October 31, 1999) was again unsatisfactory, despite the improvement made. Group operating profit was FIM 6,500, and profit before appropriations and taxes amounted to MFIM 1.0. Under Efore's dividend distribution policy the Board will propose to the Annual General Meeting that a dividend of FIM 1.10 per share be distributed for 1999.

The most extensive product development programme in Efore's history continued, at a cost of MFIM 19.6, significantly affecting the result for the year. Development costs of MFIM 4.4 for certain long-term projects were capitalized in the balance sheet. An extraordinary expense item of MFIM 1.8 was booked for slow-moving materials in stock.

The new Epos rectifier system was launched during the year and deliveries begun in summer 1999. Sales of rectifier systems did not, however, rise to the level of the previous year, despite the revival in demand at the end of the year. Trade with Russia was recommenced.

The Group's main objectives for the year were an improvement in profitability and the implementation of its global strategy.

On October 1, 1999, the Group's Finnish product development functions were centralized into Efore Power Design Oy, formerly IL-Power Oy, the purpose being to simplify the organizational structure and to improve the use of product development resources.

Operations at Efore (USA), Inc. showed a positive trend at the end of the year, following its reorganization and resolution of the production problems experienced at the start of the year. Nevertheless, the company once again recorded a considerable loss for the year.

Preparations were made during the year for establishing an Efore subsidiary in China.

The utilization rate of the new production line introduced in August 1998 at the parent company's Saarijärvi factory was still low at the start of the year. A satisfactory utilization rate was reached in July.

Following the restructuring, Muuntolaite Oy has improved the cost efficiency of its operations.

The products designed by Efore are mainly custom-designed power supplies and rectifier systems. The majority of users of Efore products are companies in the telecommunications, medical technology and automation sectors. A significant proportion of Group turnover is derived from custom-designed products and from long-term framework agreements.

Efore's competitiveness is based on use of the most highly developed technology for its products and on the latest production technology for their manufacture. All the Group's production plants operate with ISO 9001 quality certification.

The Group's largest factory unit is at Saarijärvi in central Finland. The Efore (USA), Inc. factory, located at Irving near Dallas in the United States, has a smaller capacity. Muuntolaite Oy, which mainly produces rectifier systems, is located at Vantaa, Finland. Efore Power Design Oy (formerly IL-Power Oy) designs products for manufacture in the Group's production plants.

#### **Turnover up 10.9 %**

Group turnover for the year rose to MFIM 289.9 (1998: MFIM 261.5). This fell short of the Group's turnover target, which would have produced an acceptable result, but nevertheless represented an increase of 10.9 % (1998: 2.4 %) on the previous year's turnover. Parent company turnover grew 16.3 % to reach MFIM 200,0 (1998: MFIM 172.0). Group exports and turnover outside Finland amounted to MFIM 119.2 (1998: MFIM 106.1), or 41.1 % of turnover. The most important market areas besides Finland are the United Kingdom, the United States, Sweden, Russia and the Baltic countries. Exports to Russia and the Baltic countries showed a favourable trend following the difficulties of 1998.

As in the previous year, business fluctuated rapidly and was difficult to predict. In terms of units produced, the volume of manufactured products was up on the previous year.

#### Improved result but still unsatisfactory

The Group result for the year, expressed in comparable terms, showed a slight increase on the previous year's figure. The Group's financial performance was affected by the low utilization rate of Efore's factories at the start of the year, the quality problems at Efore (USA), Inc. and the major investment in product

development. When examining the result it should be noted that product development expenditure amounting to MFIM 4.4 was capitalized in the balance sheet. MFIM - 0.8 was booked in the Group result as the Group's share of the German associated

Efore PIc booked a reduction in value of MFIM 10.5 on the shares of its US subsidiary on account of the accumulated losses of the subsidiary, which affects the parent company result and is eliminated in the Group's financial statements.

company's loss.

Group operating profit amounted to FIM 6,500 (1998: net operating loss MFIM -6.2), and parent company operating profit to MFIM 8.2 (1998: MFIM 0.3). Group profit before appropriations and taxes was MFIM 1.0 (1998: loss MFIM -6.6). Taxes entered for the year totalled MFIM 1.3, and the change in deferred tax liability was MFIM 0.4. A possible tax consequence of MFIM 1.7, resulting from the sale of the company's own shares that had come into its possession in the earlier merger, has been taken into account in the parent company as a voluntary provision, weakening the result. This is, however, still under appeal, and the company believes it has a good case. Voluntary provisions within the Group are included in non-distributable unrestricted equity.

Earnings per share were FIM 0.04 (1998: FIM -1.71). Return on investment (ROI) amounted to 2.6 % (1998: -2.7 %), and return on equity (ROE) to 0.2 % (1998: -6.7 %).

#### **Financial position remained sound**

The Group's financial position improved during the year. Current assets at the close of the year were MFIM 33.3 (1998: MFIM 14.5). Long-term (non-current) loans amounting to MFIM 5.1 were repaid and MFIM 10.8 of new loans were drawn. A total of MFIM 4.0 was paid in dividends. The Group solvency ratio at the end of the year was 46.8 % (1998: 52.7 %). The financial position was weakened by the investments made and by the working capital needs of the US and UK subsidiaries. The total on the consolidated balance sheet was MFIM 190.8 (1998: MFIM 178.6). The ratio of net debt to shareholders' equity (i.e. gearing), describing the Group's indebtedness, stood at 25.8 % (1998: 38.4 %).

#### Investments

The Group invested MFIM 11.1 (includes 4.4 MFIM capitalized product development expenditures), or 3.8 % of turnover, in fixed assets during the year, which was considerably less than in the previous year. Replacements accounted for about half of this. The

Efore's personnel are highly skilled and well motivated.

most significant new investment was the additional equipment for the new production line introduced the previous year at the Saarijärvi factory. Additional investment was also directed at the Group's new information system acquired the previous year. Expenditure on replacement was also important in modernizing acquisitions made earlier and is essential to preserve competitiveness.

Investment expenditure in 2000 is expected to be at the level of the previous year, since no decisions have been made for any major new investments.

#### **Environmental policy and impact**

Development of the Efore Plc environmental system is based on the international ISO 14001 standard, which is being applied to all the company's operations. The aim is to obtain certification under the standard by June 2000. The environmental system was preaudited by the Finnish Standards Association in January 2000, and it has been agreed that the actual audit will take place in March 2000. Contact persons for environmental matters have been appointed for each function.

Efore's management is not aware of any environmental risks or liabilities that would have a significant impact on the financial position of the company.

18

#### Personnel employed

The number of persons employed by the Group grew by 15, bringing the average employed by Group companies during the year to 491 (1998: 476), and to 492 at the close of the year. The number of personnel employed by Muuntolaite was reduced. All product development personnel were transferred on October 1, 1999 from Efore Plc and Muuntolaite Oy to the service of Efore Power Design Oy, in connection with the centralization of product development functions.

An agreement on flexible working time is in force at the Saarijärvi factory, which will enable it to respond quickly to fluctuations in demand. In addition to this, both the Saarijärvi and Efore (USA), Inc. plants have, where necessary, been employing temporary personnel.

#### The euro and 2000

Preparations have been made for introduction of the euro by renewing operational control and financial management systems. The Group's Finnish companies will start using the euro in their accounting and financial reporting as of November 1, 2000. The aim is rapid and widespread introduction of the euro. Preparations for the year 2000, begun in 1998, proceeded as planned, and no problems were encountered with the Group's technical facilities or IT systems during the changeover to the new millennium.

#### Outlook for the current year

The new financial year began for the company with record invoicing, reaching MFIM 67 (1998: MFIM 48) for November and December, and demand has continued at a reasonable level in January. Invoicing is largely based on daily orders from customers and is therefore subject to considerable variation at short notice. Demand for Efore's products over the medium term is growing, however, and the demand for new product development projects looks as though it will remain buoyant.

With the aid of its cost-cutting programme, Efore is prepared for yet tougher competition and for any quieter spells in the business. The result for the first quarter of the year is expected to be clearly positive. Achieving a satisfactory result will require productive use of completed projects and investments and continued development of expertise to ensure the company's competitiveness and safeguard its position in the market.

Following the close of the financial year, Efore set up a subsidiary in China. Efore (Suzhou) Electronics Co., Ltd. will manage local customer relations and logistics, and support Efore's procurement by acquiring local materials for the needs of the whole Group. At this stage, production will rely on local subcontracting.

# Board of Directors' Proposal for the Distribution of Dividends

The Board of Directors' proposal for the distribution of dividends is based on the recommendation of investors and shareholders. Accordingly, the aim is to pay a regular annual dividend from at least half of the net profit for the year, the other half being reserved for the company's investment and development needs. Distributable funds accumulated from previous years can also be used for payment of dividends, thus allowing the dividend to be secured in any years of unfavourable results and thereby ensuring compliance with the policy of regular dividends.

#### EFORE PLC SHARES AND SHAREHOLDERS

#### Shares and share capital

Until registration on July 1, 1999 of the 11,000 series A shares subscribed under the 1994 option rights, Efore's share capital totalled FIM 39,736,220. Following registration of these subscriptions the company's paid up share capital entered in the trade register amounted to FIM 39,846,220, and its total number of shares was 3,984,622. Under the Efore Plc Articles of Association the company's minimum share capital is FIM 20,000,000 and its maximum share capital FIM 80,000,000, within which limits the share capital can be raised or reduced without amending the Articles of Association.

The nominal value of one share is FIM 10. The shares are divided into series A shares and series K shares. According to the Articles of Association there can be a minimum of 1,857,200 and a maximum of 7,428,800 series A shares, and a minimum of 142,800 and a maximum of 571,200 series K shares. The series A shares each carry one vote and the series K shares 20 votes. According to section 7 of the Articles of Association, the assignability of series K shares is restricted by a redemption clause. The company's shares are included in the book-entry system.

#### Market and market maker

Efore Plc's shares are quoted on the I list (Investors' list) of the Helsinki Exchanges. The company has a market-making agreement with Merita Securities Ltd. The Merita Securities broker has undertaken to provide quotations and to buy and sell Efore's shares.

# Board of Directors' authority to increase the share capital

The Annual General Meeting of March 10, 1999 was not requested to grant authorization to the Board of Directors to increase the share capital of Efore Plc. The Board of Directors does not have any other valid authority to perform share issues.

#### 1994 warrant bond to management

The loan period of the warrant bond of FIM 50,000 subscribed by Efore PIc management and Board members in 1994 is five years and the interest rate 3 %. The warrants concerning the loan give entitlement to subscribe a total of 286,000 new series A shares at a price of FIM 42.30 per share during the period December 1, 1998 - January 31, 2000. The number of shares subscribed with warrants can be a maximum of 6.46 % of all Efore shares and 3.0 % of the votes. A total of 11,000 series A shares had been subscribed on the basis of the warrant bond by October 31, 1999.

#### 1998 option rights programme

The Annual General Meeting of 1998 approved the proposal to award option rights to the management and to a broad range of salaried employees of the company and its Finnish subsidiaries. A total of 120,000 option rights were issued free of charge, giving entitlement to subscribe 120,000 Efore Plc series A shares in phases between April 1, 2000 and December 31, 2004 at a price of FIM 96.00 per share. The subscription price will be reduced after the issue of option rights and by the amount of the dividends distributed during the validity period of the option rights (before December 31, 2004). The share subscription price must, however, be no less than the nominal value of the share. The option rights programme forms part of the personnel incentive system, and entitlement to subscribe shares shall apply only to Efore personnel. The total number of shares subscribed on the basis of the option rights can be no more than 2.74 % of the company's shares and 1.29 % of the votes.

#### Efore Plc's share prices and trading volume in 1996-1999

#### Shareholdings of company management

According to the share register, the company's Board members, its CEO and Deputy CEO, together with organizations falling within their authority as referred to in section 5, chapter 1 of the Securities Markets Act, owned a total of 488,112 Efore Plc shares, amounting to 12.25 % of the total capital stock and 34.28 % of the voting rights, as at October 31, 1999.

In 1994, some of the company's Board members and management subscribed Efore Oy's warrant bond to management, which gives entitlement to subscribe 286,000 share-issue adjusted series A shares at a price of FIM 42.30 per share during the period December 1, 1998 - January 31, 2000. If the subscription entitlement is fully used, the total share-issue adjusted number of shares available to Board members on the basis of the warrant bond would be 94,380, and the number of unsubscribed (unused) shares would be 83,380, together representing 1.96 % (1998: 2.38 %) of the increased total number of shares and 0.91 % (1998: 1.05 %) of the votes.

On the basis of the 1998 option rights, the company's CEO may subscribe 2,400 series A shares, which, once all option rights have been used, equals 0.055 % of the share total. After all warrants launched in 1994 and 1998 have been used, members of the Board and the CEO will own a maximum of 576,292 shares, amounting to 13.16 % of the increased total number of shares and 34.22 % of the votes.

The majority of Efore's products are used mainly in custom-designed telecommunications applications.

# **Accounting Principles**

Efore Group's consolidated accounts have been prepared in accordance with the accounting principles defined in the new Finnish Accounting Act, which came into effect in 1998. The 1998 figures presented for comparison purposes have been amended in accordance with the new Act, the profit and loss account and balance sheet being arranged in the manner required by the Act. As a result, the comparative data for 1998 have changed.

# Scope of the consolidation and accounting principles applied

The consolidated accounts include the parent company Efore Plc and all the enterprises in which the parent company held, directly or indirectly, more than 50 per cent of the votes conferred by shares or holdings at the close of the financial year.

The consolidated accounts have been compiled using the acquisition cost method. The amount of the acquisition cost of the subsidiaries' shares in excess of their shareholders' equity at the time of acquisition is shown on the balance sheet as a separate item under Group goodwill and shall be amortized according to plan over a period of five years. All intracompany transactions, unrealized margins on internal deliveries, receivables and liabilities, and internal profit distribution have been eliminated.

The associated company Power Innovation GmbH has been consolidated using the equity method. The associated company JES Logistics Ltd. has not been consolidated into the Group financial statements, as it has no material bearing on the Group's result or distributable shareholders' equity.

# Translation of the financial statements of foreign subsidiaries

In the consolidated accounts the balance sheet items of the foreign subsidiaries have been translated into Finnish markkas using the Bank of Finland middle rates quoted on the balance sheet date. The profit and loss accounts have been translated into Finnish markkas using the average rates of exchange for the financial year calculated on the basis of the Bank of Finland middle rates for each month. The translation differences arising from this, as with the translation differences for shareholders' equity, are presented in the balance sheet liabilities under the item 'retained earnings'.

#### Foreign currency items

31

Transactions in foreign currencies have been recorded at the rate of exchange prevailing on the date of transaction. The outstanding receivables and liabilities in foreign currencies at the end of the financial year have been valued using the middle rates of exchange published by the Bank of Finland on the balance sheet date. Exchange rate gains and losses relating to ordinary business operations have been adjusted against sales and purchases. Exchange rate gains and losses from financing have been entered as net amounts in financial income and financial expenses. Unrealized exchange-rate losses from non-current loan receivables have been entered in the 'accruals and deferred income' item under liabilities on the balance sheet. In the previous financial year exchange-rate losses of FIM 939,000 were entered in the valuation items under assets on the balance sheet. In the comparative balance sheet they have been transferred to 'prepayments and accrued income', because the new balance sheet has no valuation items

#### **Fixed assets**

The values of fixed assets are based on their historical cost. For tangible fixed assets, straight-line depreciation according to plan is used, which is based on expected useful lifetime. No depreciation is made on the value of land. Profit and loss from the sale of fixed assets are included in the operating result.

The expected useful lifetimes of the different commodity groups is as follows:

| Development expenses          | 3-5 years  |
|-------------------------------|------------|
| Intangible rights             | 5 years    |
| Other capitalized expenditure | 5-10 years |
| Group goodwill                | 5 years    |
| Buildings and constructions   | 15 years   |
| Machinery and equipment       | 5-10 years |
| Other tangible assets         | 5-20 years |

#### **Stocks**

Raw materials included in stocks are stated at their weighted average cost. The value of stock is comprised of direct costs. The inventory value of slow-moving materials in stock has been reduced for the Group by MFIM 1.8. 32

#### **Current investments**

Shares have been valued at the lower of cost or market value at the balance sheet date.

#### Appropriations and deferred tax liabilities

The appropriations in the consolidated balance sheet, consisting of accelerated depreciation and voluntary provisions, have been divided into shareholders' equity and deferred tax liability. The deferred part of the changes in depreciation reserve for fixed assets in the profit and loss accounts of Group companies has been separated as a tax item for the period in the financial statements.

Under the previous accounting practice, appropriations were presented as a separate item in the liabilities on the consolidated balance sheet and no deferred tax liability was separated from them. Neither were deferred taxes presented in the consolidated profit and loss account.

As a result of the change in the way appropriations are handled, the amount of Group shareholders' equity shown in the balance sheet for the comparative year 1998 increased by FIM 3,575,000. Taking into account the change in accounting practice, the 1998 loss after taxes was then FIM -6,791,000. Under the Companies Act, the appropriations included in the Group shareholders' equity are not distributable shareholders' equity.

In accordance with the principle of prudence, the deferred tax receivable is not calculated on a loss by a foreign subsidiary.

A possible tax consequence of MFIM 1.7, resulting from the sale of the company's own shares that had come into its possession in the earlier merger, has been taken into account in the parent company as a voluntary provision. This is, however, still

under appeal, and the company believes it has a good case. Voluntary provisions within the Group are included in non-distributable unrestricted equity.

#### Net turnover

In calculating turnover, sales discounts, indirect sales taxes and exchange rate differences arising from translating trade receivables denominated in foreign currencies have been deducted from sales revenue.

#### Product development expenditure

Accounting practice has been changed so that development expenses accruing income over three or more years is, in the case of the largest individual projects, capitalized as development expenses under intangible assets and amortized over 3-5 years. Efore therefore intends to more accurately divide development expenses amongst the financial years in which it accrues income. In capitalizing product development expenditure, Efore has complied with the Ministry of Trade and Industry's decision on capitalizing development expenses in the balance sheet. For the Group, the capitalized direct product development expenditure amounts to MFIM 4.4.

#### Pensions

Pension costs have been charged against income in the result, each in accordance with the appropriate practice of the countries concerned. The pension cover of the company's Finnish employees has been arranged through a pension insurance company.

#### **Income taxes**

The financial statements include income taxes calculated on the basis of results for the financial year and local tax regulations, and tax adjustments from previous periods. Income taxes in the consolidated profit and loss account also include changes in deferred tax liability, in accordance with the new Accounting Act.

#### Dividends

The dividend proposed by the Board of Directors to the Annual General Meeting has not been recorded in the financial statements. This will be done after the decision by the Annual General Meeting.

Several leading companies in industrial automation use Efore power supplies.

The capitalization of development expenses, introduced in 1999 in accordance with a decision of the Ministry of Trade and Industry, improved the result for the year before taxes by MFIM 4.4. If the same method had been used in the period 1995-1998, the result for each of those years would have improved by an estimated MFIM 1-2.5.

# **Board of Directors' Proposal for the Distribution of Retained Earnings**

From left: Olli Kokkonen, Matti Tammivuori, Pirkko Fabritius, Aarne J. Valkama, Hannes Fabritius, Matti Ruhala, Risto Kari (Deputy Board member).

According to the final accounts at October 31, 1999, the parent company's distributable shareholders' equity is FIM 45,992,972.84. The Group's distributable shareholders' equity is FIM 12,324,981.03, once the Group's shareholders' equity has been reduced by the proportion transferred from voluntary provisions and depreciation reserve and by the other non-distributable items.

The Board of Directors proposes to the Annual General Meeting that a dividend of FIM 1.10 per share be distributed, or a total of FIM 4,383,084.20, and that the remainder of FIM 7,941,896.83 be entered under the item 'retained earnings'.

# Auditors' Report

### To the shareholders of Efore Plc

We have audited the accounting, the financial statements and the corporate governance of Efore Plc for the financial period November 1, 1998 to October 31, 1999. The financial statements, which include the report of the Board of Directors, the consolidated and parent company income statements, balance sheets and the notes to the financial statements, have been prepared by the Board of Directors and the CEO. Based on our audit, we express an opinion on these financial statements and on the corporate governance.

We have conducted the audit in accordance with the Finnish Standards on Auditing. Those standards require that we perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by the management as well as evaluating the overall financial statement presentation. The purpose of our audit of corporate governance is to examine that the members of the Board of Directors and the CEO have legally complied with the rules of the Companies' Act. In our opinion, the financial statements, which show a profit for the period of FIM 175.206,85 for the Group, have been prepared in accordance with the Accounting Act and other rules and regulations governing the preparation of financial statements in Finland. The financial statements give a true and fair view, as defined in the Accounting Act, of the result of operations as well as of the financial position of the Group and the parent company. The financial statements with the consolidated financial statements, can be adopted, and the members of the Board of Directors and the CEO of the parent company can be discharged from liability for the financial period audited by us. The proposal by the Board of Directors regarding the distribution of retained earnings is in compliance with the Companies' Act.

We have reviewed the interim report published during the financial year. The interim report has been prepared in accordance with applicable regulations.

Espoo, February 8, 2000 Tilintarkastajien Oy - Ernst & Young Authorized Accounting Firm Olli Mäkinen Authorized Public Accountant

# **Efore Group Administration**

### **Group Structure**

The Efore Group comprises the parent company Efore Plc and its wholly owned subsidiaries Muuntolaite Oy, Efore Power Design Oy (formerly IL-Power Oy), FI-Systems Oy, Efore (UK) Ltd, Efore (USA), Inc., and Efore (Suzhou) Electronics Co., Ltd. All these companies are together responsible for the business operations of the Group.

On April 1, 1999 the Group's operations were divided into two Business Areas: Custom-Designed Power Supplies and Power Systems. The Areas comprise three Business Units specializing in custom-designed power supply solutions and one Business Unit focusing on system solutions. At the same time, management of the Group's production, product development and materials functions was centralized under the direct control of the CEO. Under this arrangement, the General Managers and Presidents of the subsidiaries now report directly to the CEO. Business support processes were combined under the direction of the Deputy CEO. These changes simplify the structure of units and functions within the company.

The parent company's General Meeting, Board of Directors, CEO and Group Management Board are responsible for the administration and operations of the Group. The operation of each subsidiary is the responsibility of its own Board of Directors. These Boards comprise members of the Efore Plc Board of Directors or members of the Group's senior management. The Group's parent company Efore Plc provides the subsidiaries with services related to the common activities of the Group and is also responsible for strategic planning, financial matters and funding.

### Guidelines to be followed

Helsinki Exchanges recommends that Finnish listed companies observe the guidelines issued in 1997 by the Central Chamber of Commerce and the Confederation of Finnish Industry and Employers regarding the administration of public companies. The guidelines have been compiled following comparison with international practice and are based on the need to clarify the administrative practice of Finnish companies and to issue investors with better information about the administrative arrangements of companies. Efore Plc takes these guidelines into account in its operations.

### Duties and responsibilities of the Board of Directors

The duties and responsibilities of the company's Board of Directors are defined in the Finnish Companies Act and other legislation. The General Meeting, which normally convenes once a year, is the supreme decision-making authority and, under the Companies Act, is solely responsible for all important matters such as amendments to the Articles of Association, election of the Board of Directors, appointment of auditors, approval of the financial statements and decisions concerning the amount of dividend payable. The Board of Directors has general judicial power in all company matters which are not stipulated by law or under the Articles of Association for the decision or action of another authority. The general duty of the Board of Directors is to see to the administration of the company and the appropriate organization of the company's operations. Other duties of the Board of Directors are:

- Appointment of the CEO and Deputy CEO
- Ensuring that supervision of the company's bookkeeping and financial management is properly organized
- Taking decisions on unusual or far-reaching matters, taking into account the extent and nature of the company's operations
- Directing and supervising the routine business managed by the company's CEO, for example by issuing rules and instructions
- Representing the company and signing for the company
- Granting the right to sign for the company to any other party than those named as signing for the company in the Articles of Association
- Deciding the company's dividend policy and proposing to the Annual General Meeting the amount of dividend payable each year
  Convening the General Meeting

The Board of Directors always acts in the interests of the company. The aim is to guide the operations of the company so that it can produce a good result and added value on the capital invested in it. The principal duties of the Board of Directors are:

- Approval of operational plans and budgets and supervision of their implementation
- Approval for investments, and taking decisions on major investments to be implemented in the Group, on possible corporate acquisitions and on important property sales
- Ratification of the Group's business strategies
- Ratification of the main aspects of the Group's organizational structure
- Determining the fees to be paid to the company's CEO and Deputy CEO and other members of the management
- Following the issues that concern risk management and internal supervision
- Defining and monitoring the Group's ethical practices

The Board of Directors reviews its practices, as set out in the Corporate Governance Recommendation, at least once a year.

# Procedure for electing members of the Board of Directors

The General Meeting elects the members and deputy members of the Board of Directors by simple majority vote for a term of office that ends with the close of the first Annual General Meeting following their election. Thus each Annual General Meeting always elects the entire Board of Directors. The Board of Directors elects from amongst its members a chairman for the period until the close of the next Annual General Meeting. A member of the Board of Directors may be relieved of his or her duties at any time by majority decision at a General Meeting of the company. Proposals for the General Meeting concerning the election of Board members which come to the attention of the Board of Directors before the General Meeting are made public provided that the proposal is supported by at least 10 % of the total votes of the company and the person proposed has given his or her consent.

#### Current composition of the Board of Directors

According to the Articles of Association, the company's Board of Directors shall have a minimum of three and a maximum of seven members and a maximum of one deputy member. The company's Board of Directors currently has six members and one deputy member. The company's CEO is not a member of the Board of Directors.

### Meetings of the Board of Directors

The Board of Directors has convened on ten to twelve occasions a year at the company's headquarters in Espoo. The Board has also held meetings at other Group locations, at which time it has taken the opportunity to have a closer look at the particular operations undertaken at these locations.

### **CEO and Group Management Board**

The task of the CEO is to manage and supervise the operations of the company in accordance with the instructions and regulations issued by the Board of Directors. To assist in this, the CEO has established a Group Management Board, in which the personnel are also represented. The composition of the Group Management Board is subject to the approval of the Board of Directors.

### System of supervision

The company uses financial reporting systems to supervise its business operations and financial management. Supervision of bookkeeping and financial management is the responsibility of the company's Board of Directors, while the organization of these is, in practice, the responsibility of the CEO. The separate functioning of each of the Group's subsidiaries simplifies operations and eases the supervision of administration and financial performance. Auditing of foreign subsidiaries is carried out by local auditors who report to the Board of Directors of the subsidiary and to the parent company's auditors. Auditing of Efore PIc is the responsibility of the Authorized Accounting Firm Tilintarkastajien Oy - Ernst & Young and Authorized Public Accountant Olli Mäkinen as responsible auditor. Auditing of the UK subsidiary Efore (UK) Ltd. is the responsibility of Paul Chamberlain, and auditing of Efore (USA), Inc. is the responsibility of Rebecca Teaque. Authorized Public Accountant Olli Mäkinen is responsible for organizing and coordinating the auditing carried out within the Group. Efore's auditing programme is planned each year by responsible auditor and the Efore Plc management. The auditing programme examines certain jointly agreed areas in detail, because the Group has no separate internal auditing organization of its own. The company's auditors provide the shareholders with an Auditor's Report as required by law, and this is published with the company's annual financial statements. In addition, the auditors report their findings to the Board of Directors at least twice a year.
