F-Secure Corporation

F-Secure Corporation is a leading provider of centrally managed security for today's widely distributed enterprises and mobile workforces. The company offers a full range of award-winning, integrated anti-virus, file encryption, distributed firewall and VPN solutions for workstations, servers, gateways and mobile devices. Special emphasis is placed on security in the emerging wireless IT environment.

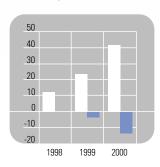

F-Secure products are uniquely suited for delivery of Security as a Service™, which provides invisible, reliable, always-on, and up-to-date security to widely distributed user bases. Whether managed by a corporate systems group or service provider, F-Secure solutions extend continuous, robust security to all systems and devices where information is created, stored or accessed.

F-Secure was founded in 1988. F-Secure Corporation is listed on the Helsinki Stock Exchange [HEX: FSC]. The company is headquartered in Espoo, Finland with North American headquarters in San Jose, California and country offices in Europe and Asia.

Quarterly reports will be released on May 8, August 7, and October 30, 2001. The annual shareholders' meeting will be held on April 3, 2001. Investor inquiries may be directed to F-Secure Corporation, Investor Relations Department, at +358 9 2520 5542.

F-Secure's leadership in virus and malicious code protection

became clear in May during the LoveLetter virus attack. F-Secure was the first anti-virus company to discover the virus and warn the IT world, and the first to provide an update for detecting and removing it.

Personnel Growth 1998-2000

 \square Finland ■ North America

Shaping an industry is a top-line requirement of leading it

The year 2000 was F-Secure Corporation's first full year as a publicly listed company. We delivered on the promise of growing our revenues by 76 percent over the preceding year. We accelerated our progress by establishing numerous new client and partner relationships, and by strengthening our leadership in Security as a Service™ and wireless security. We were also tremendously successful in hiring key industry talent and growing our workforce to 427 personnel.

Market Affirms F-Secure's Architectural Leadership

Most of all, the year 2000 was one of establishing F-Secure's architectural leadership in the industry. We received validation from the market that the path we have chosen is the right one: security must be extended to all systems and devices in the corporate IT fleet, and systems personnel must be able to manage it all centrally.

Our F-Secure Policy Manager architecture, originally launched in 1999, gained mind share among IT professionals as the long-awaited solution for manageable, end-to-end security, and we expect enthusiasm for it to grow as we move ahead. Our Security as a Service concept matured and we signed a number of key partnership agreements with leading service providers.

Building the Business on Customer Success

In the summer of 2000 we launched a Customer Advocacy (CA) organization dedicated to advocating the technology and business needs of our clients, at all levels of the company. One of its duties is to be highly proactive in measuring customer satisfaction with F-Secure products, services and support. The CA group also promotes a company-wide culture of passionate commitment to customer success.

The initial results have been highly encouraging. Customer satisfaction figures have risen steadily since the inception of the CA organization. High customer satisfaction is a key factor in achieving our goal to cross-sell more applications to existing customers.

We call this new part of F-Secure "The Customer's Voice" and expect that voice to be heard loud and clear whenever decisions affecting the customer are made.

Attracting the Best Talent

During the year we were highly successful in recruiting key personnel. They bring with them a wealth of experience in IT, security, wireless technology, business development, sales and service provision from industry-leading companies. We are pleased that the entire F-Secure team shares in the company's unique vision and wants to contribute to it.

New Subsidiary Turns Security Into E-Service

We have seen a growing trend in the outsourcing of security to service providers, a development which is reshaping the security vendor market. In 2000 we launched more than ten new partnerships with major players in this field and began to build business relationships that will create new revenue streams.

In September we launched F-Secure Online Solutions to fortify our position in the security outsourcing market. This dynamic new subsidiary is a security service provider to systems management companies, ISPs and ASPs. In late 2000 this new business saw early gains and is well on track to establish significant partnerships in 2001.

Leadership

Complete Security for All Wireless Platforms

The new wireless devices that combine PDA and smartphone functionality are taking over much of the work traditionally done on the desktop. These personal computers of tomorrow store large amounts of company information and support many kinds of business applications.

With instant connectivity to a multitude of servers and services, it has become easy to download content to these devices. The operating systems are open and well documented, allowing the terminals to be easily personalized with a growing range of third-party software.

Already we see a clear market demand emerging for wireless content security in both consumer and corporate markets. The market requirements are very demanding; these products must offer protection equal in maturity and performance to those designed for PC and LAN environments. This requires centrally managed real-time security against a wide range of threats.

F-Secure has been the forerunner in creating content security applications that are optimized for wireless devices and offer reliable, automatic on-device protection. We have set the bar extremely high for our wireless security products with real-time, service-provision-enabled solutions. We believe the mobile user must have both antivirus and file encryption with real-time capability, and we remain the only vendor to provide a full mobile security solution for all major platforms.

Setting the New Security Standard

Today F-Secure stands uniquely positioned to leverage its platform and cross-sell new applications in our established security market. Our relentless pursuit to increase customer satisfaction while establishing new key partnerships will fuel our growth in the near term.

F-Secure began taking determined steps to build its wireless security competence long before the mobile security trend emerged. The year 2001 will be an important one in realizing F-Secure's wireless mission. Much like our customary business, service providers will play an increasing role in delivering these new applications to the market.

Our unrivaled scope of competence gives us a unique advantage over competitors in securing the highly diverse IT fleets of tomorrow. We will continue to capitalize on the ever-increasing need for the managed security of all information assets in today's corporation, wherever those resources are created, stored or transmitted – from server and desktop to laptop and palmtop.

All of us at F-Secure look forward to the future with great anticipation and confidence. I would like to thank our clients, partners, investors, and the entire F-Secure team for their valuable support and involvement – it makes all the difference.

Risto Siilasmaa President and CEO

THE F-SECURE BUSINESS

Skill creates the potential for success but partnership brings it to life

Teamwork

The partner channel has become an essential component of the business. As the company focuses on developing security products that can be updated daily, F-Secure partners complete the circle with a range of complementary services.

Risk analyses, security policy development, consulting, systems integration, and local after-sales support are a few of the services we rely on partners to deliver.

Plan for Partnership

The F-Secure Solution Provider Program (FSSP) was introduced in early 2000. This commercial partner program incorporates partner training, certification and other cooperation measures into a win/win business model.

The F-Secure Solution Provider model has been a success with consulting firms and systems integrators in every F-Secure market. This program will continue to grow as the business moves towards security services and wireless platforms. We know that when our partners succeed, we succeed.

Teaming Up with Sprint e-Solutions

Sprint e-Solutions was one of the key partners to join the F-Secure Solution Provider Program in 2000. As part of the Sprint family of telecommunication companies, Sprint e-Solutions provides integration management and support services for distributed computing technology. Sprint e-Solutions delivers solutions around five key areas of expertise: security, network management, application deployment, convergence and emerging technologies.

Sprint e-Solutions and F-Secure have jointly created a comprehensive solution to help their healthcare customers comply with the U.S. Health Insurance Portability and Accountability Act (HIPAA).

"With the F-Secure product range, Sprint e-Solutions enhances its professional security services to provide a formidable HIPAA solution by protecting all links in the virtual corporate network including clients, servers and gateways — with full installation and management capabilities from a central location."

> Dr. Rob Robinson Security Practice Principal Sprint Enterprise Network Services

Security Management

F-Secure Policy Manager provides a scalable way to manage the security of multiple applications on multiple operating systems, from one central location. The power of the F-Secure Policy Manager rests in its distributed management architecture, which provides massive scalability for a widely distributed mobile workforce, and handles all management functions on local hosts.

THE F-SECURE BUSINESS

To tackle the depths of a problem, you have to jump in with both feet

Insight

As companies become increasingly tied together by a complex mesh of new networks – public and private, wireline and wireless – greater security is needed to ensure safe access to corporate information.

The rise of the extended corporate network and its interaction with the Internet has created an urgent need for security solutions that are centrally managed, widely distributed and scalable, for an array of systems and devices.

Extending the Security Net

F-Secure enables businesses to take advantage of today's increased mobility and personal computing world, bringing individual security zones to each device where information is created or stored. Those security zones are extended to each connection and every transmission of information, even across unsecured networks.

Wide Security Net for Shell

Shell Services International (SSI), the IT management and outsourcing arm of the petroleum giant, chose F-Secure to strengthen the security of its wide-area communications network supporting 16 divisions in Europe and Africa.

SSI wanted to provide Shell's staff with secure file transfer protocol (SFTP) functionality, as well as high-strength encryption support. Instead of executing site-specific server updates across Europe, SSI wanted to coordinate Unix server management and updates from a centrally managed security system.

Today, SSI provides total security management, administration, updates, and support from one location in the Netherlands. This has enabled SSI to cast a larger, more complete security net over Shell's 1,700 Unix systems in Europe.

"As the F-Secure solution is proving to be a success in Europe, we are also looking at extending the reach of F-Secure SSH to our American base in Houston, and additionally to Australia and Kuala Lumpur for Asia, the Pacific Rim and the Middle East."

> Robert Matthijssen Global Service Delivery Manager for Unix Shell Services International

Network Security

F-Secure VPN+ secures the transmission of mission-critical data over TCP/IP networks like the Internet. It provides a peerless software-only solution for employees and external partners who need private access to a corporate intranet from any dial-up point.

F-Secure Distributed Firewall protects the entire corporate IT fleet against unauthorized access to corporate information. It complements the traditional perimeter firewall and takes corporate security to a new level to respond to the proliferation of mobile computing.

F-Secure SSH Client and Server enables remote systems administrators and telecommuters to access corporate network resources without revealing passwords and confidential data to possible eavesdroppers. It protects TCP/IP-based terminal connections in Unix, Windows and Macintosh environments.

THE F-SECURE BUSINESS

Today's best companies set their sights on tomorrow

Foresight

Corporate IT security faces the daunting challenge of effectively managing an expanding network environment and a growing number of links between the company and its customers.

Paradoxically, systems personnel have to do more with fewer resources than five or ten years ago, even though there is increasingly more to lose if security fails. This has led to an explosion in IT security outsourcing to third parties. IDC estimates this market will grow from \$700 million in 1999 to \$2.3 billion in 2003.

Transforming an Industry

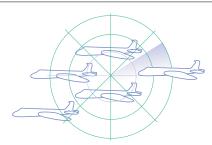

F-Secure Security as a Service™ is the world's first complete security outsourcing concept. This revolutionary value-chain strategy rewrites the rules of security delivery by empowering service providers and outsourcing companies with F-Secure's platform technology and products.

In early 2000, the Security as a Service concept was field tested by many of the world's leading service providers and outsourcing firms. Since then, a number of providers have launched their own security services employing F-Secure technology.

New Window to Security Markets

F-Secure Online Solutions (F-SOS) was launched in September 2000. This whollyowned subsidiary of F-Secure Corporation provides security solutions as a managed service to and through service providers. In essence, F-Secure Online Solutions is a security ASP, where the service is hosted either by the service provider or by F-SOS on behalf of the service provider.

Security is rapidly becoming a differentiator to large ISPs and niche ASPs alike, and their wireless counterparts will adopt the same model. F-Secure Online Solutions enables clients to deliver industry-leading security solutions to end users. This enables the service provider to exploit a lucrative opportunity for new revenue while remaining focused on its core business.

"Security is the fundamental cornerstone of TietoEnator's business, both in its internal processes and its services to customers. The strategic cooperation between F-Secure and TietoEnator is an excellent example of creating world-class solutions and services for international markets."

> Juhani Strömberg Senior Vice President, Development TietoEnator

Content Security

F-Secure Anti-Virus is the industry's strongest available defense against viruses and malicious code for both site-based and mobile workers, ensuring maximum system availability and data integrity.

F-Secure FileCrypto automatically encrypts and stores local data on-the-fly. The process is completely transparent to the end user, ensuring that data stored locally or sent over a network is always encrypted.

THE F-SECURE BUSINESS

Seeing tomorrow's challenges protects today's freedoms

Vision

The next chapter in the computing revolution will sever the wire and free us from the restrictive environment of the desktop. Workforces on the move will need fast and open access to corporate networks and services regardless of time and location.

Increasingly smart, handheld devices will process and store data autonomously and communicate with the surrounding world through various wireless access methods. Eventually, wireless devices of all sizes and shapes will become the corporate employee's preferred platform for communication and personal computing.

The New Security Challenge

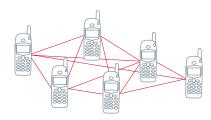

PDAs and smartphones are already part of corporate IT fleets. Employees use them to send and receive e-mail, write notes, view and work with all types of files, and permanently store confidential information.

From the security point-of-view, these devices are just like laptops – only more personal, more connected and easier to lose. All information stored on a stolen or lost device is at risk of being disclosed, and all information on memory cards and other removable media can be accessed with any compatible device.

The first wireless virus and trojan incidents have proved that it is possible to create viruses that run on PDAs and smartphones, and that these new forms of malicious code can spread quickly in wireless environments. When the next wireless virus incident occurs, users with devices protected by security applications and a supporting service will automatically receive the antidote, providing the fastest possible resolution to the problem.

Extending Security to Every Device

Installing anti-virus and file encryption applications on all devices is the only way to ensure that all company information is protected continuously. The interest in the first announcement of F-Secure's wireless solutions indicates that systems and security managers worldwide are realizing the importance of expanding the security policy to wireless devices.

"We have chosen F-Secure as our preferred mobile security provider for the zed business users. Both companies share the same vision of the smartphone turning into a full-bred computer, and we do believe that the service provider is in the key position to provide a wealth of value added applications for mobile users."

Juha Häkämies CTO Sonera Zed for Business

Wireless Security

Symbian EPOC is becoming a major operating system for today's emerging wireless devices. F-Secure Anti-Virus for EPOC was released in August as an early-availability program to qualified hardware vendors and operators.

F-Secure Anti-Virus for EPOC offers automatic real-time protection against viruses and other malicious or harmful content in all file types, without any need for user intervention. It also offers several easy methods for updating the virus signature database.

F-Secure Anti-Virus for Palm is the first antivirus product for the Palm operating system to offer on-device protection with continuous, fully automatic update service and technical support. It provides automatic scanning after HotSync and detects all known malware on the Palm OS.

The company will further expand its portfolio by launching file encryption and anti-virus products for all major platforms, including Pocket PC.

Great things happen when people put their heads together

People

Building the Client Relationship

In 2000 F-Secure evolved its customer service approach to encompass the principles of customer advocacy (CA). This new strategy is designed to intensify client relationships by ensuring customer satisfaction and success in the deployment and use of F-Secure solutions.

In July the CA group began to measure both customer satisfaction and technical support workload. The results showed that customer satisfaction improved continuously as the year progressed.

The impressive gains in both customer satisfaction and efficiency were fueled by an increasing awareness of customer success throughout the organization, as well as newly implemented communication tools and systems for global support. One of the main goals of CA in 2001 is to "push the envelope" even further by systematically improving customer satisfaction while continuing to streamline all customer service functions.

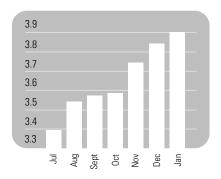

Developing the Industry's Best

Customer success depends upon the motivation and professionalism of the individual as well as the team. During 2000 the company succeeded in attracting top industry talent to its new business areas and senior sales executives to its field organization. At the same time F-Secure systematically improved the skill set of the entire organization.

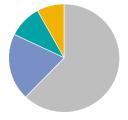

In addition to ensuring client success, F-Secure's corporate values are grounded in professionalism, egalitarianism, highly ethical conduct, teamwork and a systematic approach to building processes. The company promotes these values by providing a highly motivating, professionally challenging work environment for the industry's best professionals.

F-Secure's employee retention rate is high compared to industry standards. The annual employee turnover is a mere two percent in Europe and fourteen percent in North America, which is still well below the industry norm in Silicon Valley.

Customer Satisfaction in Technical Support

Educational Level (Wireless Business Unit and F-Secure Online Solutions)

- University Degree 62%
- College Degree 20%
- University Students 10%
- Other 8%

Social Responsibility

During 2000 F-Secure Finland achieved the World Wildlife Fund Green Office Certificate for its environmental program. F-Secure is also supporting the Finnish Association for Children with Hearth Disorders. In 2001, the company will implement several initiatives designed to increase employee awareness and participation in social and community development.

Board of Directors' Report 2000

Olli-Pekka Kallasvuo

Jari Puhakka

Kaj-Erik Relander

Business in Brief

In its main businesses areas, content security and encryption, F-Secure Group continued to grow clearly faster than the security software market in general. A third business area, security management, was established during the year and grew rapidly.

Overall, good revenue growth was seen in all regions. F-Secure signed numerous customer deals and significant partnerships in its key markets on national, regional and global levels. However, the last two weeks of December were surprisingly difficult in North America. Due to concerns about a potentially fast-deteriorating U.S. economy, many clients postponed purchasing decisions. In the United States, F-Secure Group had expected higher growth in the fourth quarter but was disappointed by the adverse development in the market. In Europe, fourth quarter sales remained strong.

During 2000 F-Secure strengthened its international presence by launching a subsidiary in Stockholm, Sweden and U.S. sales offices in Chicago and New York. Other country offices hired more personnel in the areas of key account management, channel management, and pre-sales and post-sales support. Customers who made the strategic decision to improve their corporate security with F-Secure products include Intel, Akamai, IRS, BASF, Tesco, Shell and Société Général, among others.

F-Secure's partner channel also continued to strongly evolve during the year.

The F-Secure Solution Provider program (FSSP) was introduced, which resulted in a large number of new partnerships in the key markets. In the United Kingdom, France and Germany the number of certified FSSP partnerships rose to 24.

A European-level partnership in VPN solutions with Cisco Systems was launched in April. A key partnership, geared to serve U.S. healthcare institutions building compliance with the Healthcare Insurance Portability and Accountability Act (HIPAA), was signed with Sprint Enterprise Network Solutions

F-Secure's Security as a Service initiative proved successful in the marketplace in various service provider environments. Partnerships were signed with key players such as Concert, diAx, MessageLabs and TietoEnator.

In 2000, much emphasis was placed on the future business area of wireless security by acquiring Modera Point Oy. Modera Point formed the core of the F-Secure's wireless competency center, which was supplemented by establishing a Wireless Business Unit and recruiting quality personnel from leading players in the wireless space. F-Secure successfully launched the world's first wireless security products and began to seek partnerships with key industry players.

F-Secure Group was organized into three business units: Wireless, Security as a Service, and Security as a Product. F-Secure also launched a subsidiary, F-Secure Online Solutions (F-SOS), to focus on developing and selling managed security services to and through service providers

In September, F-Secure received a positive ruling in the license dispute with SSH Communications Security Ltd. The arbitrator, nominated by the Central Chamber of Commerce, decreed that

Risto Siilasmaa

Chris Vargas

F-Secure will continue to have exclusive sales and marketing rights for the SSH product.

Financial Results Overview

Group revenues rose by 76% in 2000 to EUR 41.1 million (23.3 million in 1999). Revenue growth by region was as follows: North America 41% (33%), Nordic countries 27% (33%), all other European countries 23% (26%), and the rest of the world 9% (8%).

The significant year-to-year revenue growth was facilitated by promoting the F-Secure brand more aggressively, expanding the worldwide spread of the sales and marketing organization, and strengthening the partner channel. A total of 47% (60%) of the revenues were generated by anti-virus products, 44% (40%) from cryptography products, and 9% (0%) from other products

In addition, F-Secure Group had 10.4 million euros of deferred revenues on its balance sheet.

The operating result was EUR -13.3 million (-4.0 million). This trend is a result of the company's strategy to make significant investments in new strategic areas such as wireless security. Investments in the sales organization also grew – and produced results – at the subsidiaries in Germany, the United Kingdom, France, Japan, China, Sweden and the United States. In addition, negative developments in the U.S. market had an adverse effect on fourth quarter results.

Customer Satisfaction

In 2000 F-Secure established a Customer Advocacy (CA) organization to assure customer success in the use and deployment of F-Secure's data security solutions. Its goals are to provide exceptional customer support on a global basis, to positively affect customer relationships through electronic tools and systems, and to provide qualified customer feedback to improve the quality and timeliness of key business decisions. The CA group has measured customer satisfaction and technical support workload since July 2000. During that time customer satisfaction improved continuously, from 3.40 to 3.84 from July through December, on a scale of one to five.

Acquisitions

In April F-Secure agreed to acquire privately held Modera Point Oy of Oulu, Finland, a developer of applications for new mobile platforms. The former employees of Modera Point now form the nucleus of F-Secure's Wireless Security Competence Center. The acquisition strengthened F-Secure's strategy of extending its leading security architectures into the wireless space. The acquisition included Modera Point Inc., the U.S. subsidiary of Modera Point Oy. Modera Point Inc. was renamed Cellsoft Inc. The acquisition of Modera Point Oy was completed in December 2000 by merging the company into F-Secure Corporation.

R&D and Product Development

F-Secure continued to enhance its Policy Manager architecture (formerly known as F-Secure Framework). This underlying security management architecture enables F-Secure applications to be widely distributed to every gateway, server, desktop and laptop and centrally managed from one location.

F-Secure also streamlined its anti-virus and encryption products to bring them into full compliance with the Policy Manager plat-

form. A new product, F-Secure Distributed Firewall, was released in the second quarter. This product is targeted at the rapidly emerging paradigm shift in the firewall industry, and complements the company's portfolio.

The Wireless Business Unit launched its first products: F-Secure Anti-Virus for Palm and F-Secure Anti-Virus for EPOC. Their automated, device-resident, real-time scanning and upgrading capabilities have made them the most advanced wireless security products on the market.

Financing

F-Secure Group's financial position remained strong throughout the year. The Group's equity ratio on December 31, 2000, was 78% (compared to 76% at the end of 1999). Group financial income and liquid assets totaled 1.4 million euros (0.9) and 38.4 million, respectively.

Shareholder Equity

On April 12, the Annual General Meeting agreed to the Board's proposal of a five-for-one stock split. For a period of one year, the Board was also authorized to increase share capital by making one or more new share issues or by issuing one or more convertible bonds, option loans or option rights. As a result of such share issues, option loans, option rights or convertible bonds, the share capital of the company may be increased by no more than 105,000 euros.

The Extraordinary Shareholders' Meeting on December 29, 2000 accepted the Board of Directors' proposal that the unused portions of the authorization to increase share capital given in the Annual Shareholders' meeting on April 12, 2000, be cancelled and that the Board of Directors be authorized, during the period of one (1) year from the date of the shareholders' meeting, to increase the share capital of the company by one or more new share issues or by launching one or more convertible bonds or option loans or option rights. As a result of such share issues, option loans, option rights or convertible loans, the share capital of the company may be increased by a maximum of 280,000 euros. The maximum number of new shares to be issued is 28,000,000. The authorization remains totally unused.

During 2000, a total of 6,600,214 new

F-Secure Corporation shares were entered into the Trade Register. Of those shares, 3,488,749 were subscribed with the warrants attached to the F-Secure Option Programs; 2,404,000 by the conversion of the F-Secure Corporation 1999 Preferred Capital Note and 707,465 as a result of a direct issue to the selling shareholders of Modera Point. The entire Preferred Capital Note has been converted into shares.

The number of shares was 140,628,589 at the end of January 2001. The number of shares fully diluted would be 163,256,465, including all stock option programs.

Investments

Investments for the year totaled EUR 3.4 (3.0) million, most of which was dedicated to IT equipment and software.

Personnel and Organization

F-Secure's workforce continued to grow. During the period under review, the company's personnel grew from 302 to 427, of which 85 were based in North America, 290 in Finland and 52 in other countries. Personnel turnover was very low in Europe (2%) and higher in North America (14%). The turnover in North American was a result of F-Secure Group's decision to decentralize its North American sales activities away from San Jose, CA to other major cities.

Some of the key recruitments include Mr. Anthony Gyursanszky (formerly of Tellabs) as Vice President of the Security as a Service Business Unit, Mr. Ilkka Starck (formerly of Ericsson) as Vice President of the Wireless Business Unit, Mr. Kimmo Alkio (formerly of Compaq) as CEO of F-Secure Online Solutions, Mr. Pekka Kinnunen (formerly of Bull) as Vice President of EMEA Sales, and Mr. Mike Devere (formerly of Unisys) as Vice President of North American Sales.

There were no changes in the Board of Directors during the period: Olli-Pekka Kallasvuo, Jari Puhakka (chairman), Kaj-Erik Relander, Risto Siilasmaa and Chris Vargas. Ari Hyppönen continued as a deputy member. In January 2001, Mr. Kallasvuo was elected Chairman of the Board.

Future Outlook

The various segments of the security software business are growing at a rate of 20-45% per annum (IDC report 2000). The management believes that the company is able to grow faster than the market in general. A growing market share in established markets, such as those for anti-virus products, will accelerate the company's growth. New, fast-growing product areas, such as encryption and distributed firewalls, and the cross-selling of further F-Secure applications to existing customers will also contribute to growth in the short term.

A key strategy of F-Secure Group is to become a dominant player in the emerging wireless security market. Increasingly advanced smartphones and Personal Digital Assistants (PDAs) will continue to enter the market. According to various sources, the amount of PDAs and data-capable mobile phones will overtake the number of PCs by mid-decade. Tomorrow's wireless environment will pose new challenges to corporate security and present a new growth opportunity for the whole security software industry. F-Secure is well positioned to take advantage of these developments and capitalize on its

early leadership position in this new market.

The current uncertainty in the U.S. economy will affect F-Secure Group's growth in the first half of 2001. As the United States represents a significant percentage of the overall group revenues, the management believes year-on-year growth will only be 50% in the first half of 2001. Growth is expected to accelerate towards the end of the year as the U.S. situation improves.

Cost-savings initiatives were launched in January 2001 as the worsening U.S. sales situation became clear. The company is now putting equal emphasis on profitability and growth. As a result of these activities F-Secure Group expects fixed expenses to decrease in the first quarter of 2001 from the preceding quarter (excluding F-SOS). The total group fixed expenses should not grow from the first to second quarter of 2001 (including F-SOS).

Regardless of the slowdown, F-Secure expects to reach EBIT level profitability for the year 2001, excluding the investment in F-SOS.

Dividend Proposal

The Board of Directors proposes not to issue dividends for the year 2000.

^{*}The F-Secure Corporation 1999 Preferred Capital Note was converted to shares during the year 2000.

Accounting Principles

Principles of Consolidation

Subsidiaries in which F-Secure Corporation's holding exceeds 50 percent are consolidated in the financial statements. The Company's holding in the associated companies is also consolidated, except for the investment in PDI-Consult AS, which has been made to protect the Company's receivable and other interests and is considered a temporary holding. The Company has an agreement regarding the divestment of the holding.

The mutual ownership of shares has been eliminated using the acquisition cost method. Goodwill represents the excess of purchase cost over the fair value of assets less liabilities of acquired companies. Goodwill is depreciated on a straight-line basis in five years. The goodwill depreciation is included in administrative expenses in the profit and loss statement.

All intercompany transactions and balances have been eliminated on consolidation.

For the purposes of inclusion in the consolidated financial statements, the balance sheet of each foreign subsidiary is translated into euros at the exchange rates prevailing at the balance sheet date. The income statement of each foreign entity is translated at the average exchange rates for the financial year. The resulting net translation difference is recorded in the shareholders' equity.

The Company's holding in the associated companies is consolidated according to the equity method. The equivalent share of the associated companies' result is included in the financial items in the profit and loss statement.

The consolidated cash flow statements have been prepared by translating each subsidiary's individual cash flow statements at the average exchange rates for the period under review.

Foreign currency translations are translated into local currency using fixed monthly exchange rates. At the balance sheet date, assets and liabilities denominated in foreign currencies are translated at the rates of exchange prevailing at that date. Exchange rate gains and losses due to financial items are recorded to the financial items. Forward rate contracts for hedging purposes are recorded using the exchange rate prevailing at the balance sheet date and the interest part of the forward rate contract is accrued for the contract period.

Revenue Recognition

Revenue from product sales is primarily derived from software license agreements, consisting of initial license agreements and periodic maintenance agreements covering product updates and customer support. The revenue recognition policy of F-Secure Group recognizes the license fee revenues as the product is delivered, and the maintenance revenues are recognized ratably over the period covered by the maintenance contract.

Indirect taxes, granted discounts and exchange rate differences are excluded from the net sales.

The Company estimates and recognizes provisions for doubtful accounts periodically and records them as other operating expenses in accordance with the Finnish GAAP.

Other Operating Income

Other operating income includes profits from the sales of fixed assets and support received for research and development projects.

Representation of Expenses

The functionally represented expenses have been classified as follows: various types of expenses in different geographical locations have been allocated to the various functions by allocating directly allocable expenses to the respective function, and other operating expenses have been allocated to the above-mentioned functions on the basis of average headcount at each location

Research and Development Costs

All costs relating to research and development of the Company's software products are expensed as incurred.

Tangible and Intangible Assets

Tangible and intangible assets are recorded at historical cost less accumulated depreciation. Depreciation is recorded on a straight-line basis over the estimated useful life of an asset. Planned depreciation was taken into use on January 1, 1998. The estimated useful lives of tangible and intangible assets are as follows:

Machinery and Equipment 3 - 8 years

Other Tangible Assets 5 years
Intangible Assets and Other Long-Term Expenditure 5 years
Equipment leased under financial leases have been capitalized and represented as machinery and equipment in the consolidated financial statements.

Cash-on-hand and on deposit in banks including marketable securities are included in the liquid assets. Marketable securities consist of interest-bearing debt securities and shares in funds investing in similar instruments. Securities are recorded at lower of acquisition cost or market value.

Items related to securities trading are presented as financial income and expenses in the profit and loss statement and as investments in the balance sheet.

Mandatory Provisions

In the Company's industry it is an internationally common practice for employee incentives to be provided in the form of options. The Company's options program is widely distributed and covers all personnel. As the market price of the Company's share rises, the value of the option programs rise accordingly. This will generate taxable income to the personnel when the options are exercised. In certain countries the employer must pay social charges based on the taxable income triggered when options are exercised. The Company has booked a provision for this contingent liability to provide for the social charges estimated to be paid in the future.

Income Taxes

Direct taxes are calculated on the results of all Group companies in accordance with the local tax and accounting rules of each country. Deferred taxes, resulting from temporary differences between the financial statement and the income tax basis of assets and liabilities, use the enacted tax rates in effect in the years in which the differences are expected to reverse. Deferred tax assets are reduced by a valuation allowance when the Company cannot reasonably determine that some portion or all of the related tax assets will be realized.

Pensions

All of F-Secure Group's pensions and their benefits are of a defined nature, the majority of which are based on local statutory arrangements. Pension costs are expensed as incurred. The liability of local statutory pension schemes is fully covered by the statutory annual charges.

Extraordinary Expenses

At the end of 1999 the Company started to provide for a mandatory provision for the contingent social charge liability related to the exercise of options granted in countries other than the United States. At the end of 1999 expenses related to the public offering were also presented as extraordinary costs.

In 2000 the contingent social charge liability related to options granted to U.S. personnel were also provided for as part of the mandatory provision. The change in the mandatory provision due to the U.S. option programs has been presented as an extraordinary expense for the period under review.

15. Shareholder's Equity

On December 31, 1999, the Company had 26,804,875 shares issued and outstanding. On December 31, 1999 the pending registration of 54,000 shares subscribed with options attached to the F-Secure option program was booked into the share issue account. These shares, together with 8,700 shares subscribed with options in February 2000, were registered on March 24, 2000, after which the share capital of the Company amounted to 537,352 euros and the number of shares totaled 26,867,575. In April 2000 a directed issue of 141,493 shares was carried out, which raised the share capital by

In April 2000 the share capital was raised by 810,272 euros by transferring funds from the share premium account to the share capital. After the transfer the number of shares was divided by five. After the split the number of shares totaled 135,045,340 and the share capital amounted to 1,350,454 euros.

Between April and December 2000 shares were subscribed with options attached to F-Secure option programs and

converted with F-Secure Corporation's 1999 Preferred Capital Note as follows:

Subscription/	Registration	Number of	Increase in	Cumulative	Cumulative
Conversion	Date	New Shares	Share Capital	Number of Shares	Share Capital

On December 31, 2000 all the shares related to the Preferred Capital Note were converted. The Company's share capital amounted to 1,406,246 euros and the number of shares totaled 140,624,589 at the end of the year 2000.

The registration process of 4,000 shares converted through the use of options was pending as of December 31, 2000. The registration will increase the Company's share capital by 40 euros and the rest will be booked into the share premium account.

16. Options

The number of options presented below are adjusted with the share dividends and share splits decided by the shareholders' meetings held on February 19, 1999, October 8, 1999 and April 12, 2000.

On April 22, 1998 the shareholders' meeting decided to issue a total of 12,000,000 options, consisting of 4,200,000

On April 22, 1998 the shareholders' meeting decided to issue a total of 12,000,000 options, consisting of 4,200,000 series A options, 4,200,000 series B options and 3,600,000 series C options. Each option entitles the holder to subscribe for one share during the following periods:

Series A Options: April 1, 2000 - March 31, 2003
Series B Options: April 1, 2001 - March 31, 2004
Series C Options: April 1, 2002 - March 31, 2005
The options issued provide for the subscription of 12 million shares in total, which represented 8.5 percent of the

The options issued provide for the subscription of 12 million shares in total, which represented 8.5 percent of the Company's share capital and voting power on December 31, 2000. The subscription in full would increase the share capital by 120,000 euros. The exercise price of the options is 0.1137174 euros. During the financial period a total of 1,953,549 shares were subscribed with the options attached to this option program, and consequently the share capital was raised by 19,535 euros.

On August 10, 1999 the shareholders' meeting decided to issue 5,340,000 options expiring on September 30, 2005. Each option entitles the holder to subscribe for one share at 0.5226667 euros per share. The options issued provide for the subscription of 5,340,000 shares in total, which represented 3.7 percent of the share capital and the voting power on December 31, 2000. The subscription in full will increase the capital stock by 53,400 euros. During the financial period a total of 1,221,700 shares were subscribed with the options attached to this option program, and consequently the share capital was raised by 12,217 euros.

the share capital was raised by 12,217 euros.

In addition, on August 10, 1999 the shareholders' meeting authorized the Board of Directors to issue a maximum of 9,000,000 options, the subscription price of which will be determined later. Each option entitles the holder to subscribe for one share between January 1, 2001 and September 30, 2005. The subscription in full would increase the capital stock by 90,000 euros. Of the total of 9,000,000 options of this program, 3,750,000 have been allocated for the personnel located in the United States. The latter two option programs established on August 10, 1999 will be allocated into series A, B, C and D depending on the period they are granted. The subscription period expires on September 30, 2005 for each series. The subscription price of a share for each series is the weighted average price of the Company's shares quoted during the last five business days of the Helsinki Exchanges before the start of each series' time for distribution. The subscription price for 1999 D series is 1.54 euros, for 2000 A series 5.58 euros, for 2000 B series 13.82 euros, for 2000 C series 12.50 euros, and for 2000 D series 7.80 euros.

The maximum dilution effect of the issuance of the options described in notes 15 and 16 is 22,631,876 shares on aggregate or 13.9 percent of the Company's share capital after dilution. 18.9 million options had been issued as of December 31, 2000 and the remaining 7.4 million options were being held by the Company.

Calculation of Key Ratios

Equity ratio, %	Shareholders' equity + minority interest
	Balance total - received advance payments
ROI, %	Result before extraordinary items + financial expenses
	Balance total - non-interest bearing liabilities (average)
ROE, %	Result before extraordinary items - taxes
	Shareholders' equity + minority interest (average)
Gearing, %	Interest bearing liabilities - cash and bank accounts, marketable securities
	Shareholders' equity + minority interest
Earnings per share, euro	Result before extraordinary items - taxes +/- minority interest
	Adjusted amount of shares (average)
Shareholders' equity per share, euro	Shareholders' equity
	Adjusted amount of shares

AUDITOR'S REPORT

To the Shareholders of F-Secure Corporation

We have audited the accounting, the financial statements and the corporate governance of F-Secure Corporation for the financial year 2000. The financial statements, which include the report of the Board of Directors, and the consolidated and parent company income statements, balance sheets and notes to the financial statements, have been prepared by the Board of Directors and the Managing Director. Based on our audit we express an opinion on these financial statements and on corporate governance.

We have conducted our audit in accordance with Finnish Standards on Auditing. Those standards require that we perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining on a test basis evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management as well as evaluating the overall financial statement presentation. The purpose of our audit of corporate governance is to examine that the members of the Board of Directors and the Managing Director have legally complied with the rules of the Companies Act.

In our opinion the financial statements, which disclose a loss in the consolidated income statement of 13,113 thousand euros, have been prepared in accordance with the Accounting Act and other rules and regulations governing the preparation of financial statements. The financial statements give a true and fair view, as defined in the Accounting Act, of the consolidated and parent company's results of operations and financial position. The financial statements and consolidated financial statements can be adopted and the members of the Board of Directors and the Managing Director of the parent company can be discharged from liability for the period audited by us. The proposal by the Board of Directors regarding the result is in compliance with the Companies Act.
