In Ensto, we have agreed that we want to be the customers' preferred supplier of electrical systems. This entails the obligation to be good at the things our customers wish for and expect of their supplier. Excellent quality in our operations and products, a competitive price/quality ratio, innovative product and system solutions, installation and user friendliness are recognized, key customer expectations. Newer expectations include elegant and context-sensitive design.

Side by side with these expectations lies the perennial need for a businesslike but human touch. A customer relationship is usually built by a large group of people working on a range of tasks in different situations, and the way we handle customer encounters is critical. Successful communication between two business people is a two-way street, just as it is in our private lives, requiring the goodwill of both the supplier and customer.

We do not claim to be top flight in all of the above. However, third parties have presented us with awards for our performance in quite a few such areas – an array of supplier awards from Swedish and Finnish customers, branch awards in e.g. the Czech Republic and Poland, and Ensto being awarded by number one prize in procurement and purchases by the Finnish Association of Logistics in 2004.

However, the ultimate award is repeat orders from our customers. In 2004, we supplied close to 10% more systems and products to our customers than the year before, counted in euros. We consider this not a bad achievement in the world in which Ensto operates. Our heartfelt thanks to all our customers for the confidence they have shown in us through their orders!

Preparing for the future requires that we consider the effectiveness and rationality of our operations and, if need be, develop them in pursuit of excellent customer service. In 2004, this meant the reorganization of manual production in Ensto, which continues in 2005. To enable our product line to remain price competitive, we are transferring manual assembly to Estonia while doing our utmost to keep any delivery disruptions to a minimum.

In 2005, we will significantly increase our R&D investments, especially in product development through all branches of our businesses. In addition, we shall continue improving brand recognition and our information and communication systems to better meet the needs of our customers and ourselves. My thanks to all Ensto staff for their work during 2004 and wishing you boundless energy for your efforts in 2005.

Principles for calculating key figures

Invested capital	=	balance sheet total – non-interest debts	
Return on investment (ROI)	=	$\frac{\text{Profit before extraordinary items + interest expense and other financial expense}}{\text{Capital invested (average for period)}} \times 100$	x 100
Return on equity (ROE)	=	$\frac{\text{Profit after financial items – taxes}}{\text{Shareholder's equity + minority interest + group reserve (average for period)}} \times 100$	x 100
Solvency	=	$\frac{\text{Shareholder's equity + minority interest + group reserve}}{\text{Balance sheet total – advances received at the end of the financial period}} \times 100$	x 100
Net liabilities	=	Non-current and current liabilities – non-interest debts – cash in hand and at banks – shares	
Gearing	=	$\frac{\text{Net liabilities}}{\text{Capital + minority interest + group reserve}} \times 100$	x 100
Current ratio	=	$\frac{\text{Financial assets + current assets}}{\text{Short-term liabilities}}$	
Earnings/share (EPS)	=	$\frac{\text{Profit after financial items – minority interest and taxes}}{\text{Issue adjusted average number of shares}}$	
Equity/share	=	$\frac{\text{Capital + minority interest + group reserve}}{\text{share issue adjusted number of shares at the end of the financial period}}$	
Dividend/share	=	$\frac{\text{The dividend}}{\text{Share issue adjusted number of shares at the end of the financial period}}$	
Dividend/Profit	=	$\frac{\text{The dividend}}{\text{Earnings/share}} \times 100$	x 100

THE YEAR IN BRIEF

From the beginning of 2004, Ensto consisted of three business units operating under the Ensto brand: Ensto Building Technology, Ensto Utility Networks and Ensto Enclosures and Components.

Ensto Group's net turnover grew across the board during the financial period, as did profitability compared to the previous year.

In addition to Ensto's traditional markets, growth was attained in Russia and central Europe in particular.

2004 was a year of internal development, focused on developing information and communication technology and the Ensto brand.

NET TURNOVER AND OPERATING PROFIT

Ensto Group's net turnover for 2004 totalled EUR 163.5 million against last year's net turnover of EUR 163.1 million, i.e. an increase of 0.3% year-on-year. Growth attained 9.1% in comparable terms.

Operating profit for 2004 stood at EUR 12.1 million i.e. 7.4% of net turnover. Operating profit rose by 9.4% compared to the previous year's comparable figures.

The Group's international operations' share of net turnover was EUR 98.6 million or 60.3%, while the Nordic countries' combined share was EUR 110.8 million or 67.8%. Net turnover for eastern and central Europe were EUR 37.5 million or 22.9% of consolidated net turnover.

The table below shows Ensto's net turnover by business unit during 2004.

Turnover 2000–2004

Operating profit 2000–2004

The lines illustrate the development in comparable figures.

1 Jan.–31 Dec. 2004

M€	Net turnover		
	2004	2003	Change %

GROUP STRUCTURE

Through a transaction dated 1st January 2004, Ensto Oy purchased a 24.0% minority holding in Ensto Elsto Kft which operates in Hungary; subsequently, the company's entire stock was held by Ensto Group.

Ensto Connector Oy merged with Ensto Electric Oy on 30th September 2004.

On 8th October 2004, the unit established a new sales company, CJSC Ensto Ukraine, which will begin by focusing on the sale and marketing of utility networks solutions. At the moment, Ensto is a minority shareholder in the company. Based on the ownership agreement, Ensto will have the right to acquire a majority holding at a later date.

Ensto Control Holding Oy merged with Ensto Oy on 31st December 2004.

Ensto will restructure its operations in the United Kingdom. Ensto Briticent Ltd's business was sold to Brackenheath Ltd on 27th January 2005. In the future, Ensto Briticent Ltd will focus on Ensto systems and products, and the company has assumed the name, Ensto UK Ltd, and relocated to Southampton.

On 13th January 2004, Ensto began joint discussions in Finland with the goal of restructuring its operations in Finland and Estonia, aimed at strengthening Ensto's position as a major, competitive international provider of electrification solutions.

The discussions concluded on 14th September 2004. During this process, the division of production between the Keila factory in Estonia and the Porvoo and Mikkeli factories in Finland was reviewed, introducing a staff cut of 89 in the Ensto Porvoo factories. These jobs will be off-shored to the Ensto Keila factory, where new facilities will be completed at the end of October. Production will be transferred in stages, by April 2005.

The following foreign branch offices belong to the Ensto group: Ensto Busch-Jaeger Oy, filial Sverige; Ensto Electric Oy, filial Sverige; Ensto Control Oy, filial Sverige; and Ensto Sekko Oy, filial Sverige.

Creative solutions that increase comfort and flexibility in using premises.

ENSTO BUILDING TECHNOLOGY

Net turnover for the Ensto Building Technology business unit totalled EUR 78.3 million. The corresponding figure for 2003 was EUR 73.2 million i.e. a rise of 7.0%.

The business unit employed a staff of 416 at the end of 2004, while the corresponding figure in the previous year was 392.

Ensto Building Technology's sales grew in almost all market areas at a faster rate than the market average. The demand for electrical supplies remained stable in the main market areas in Scandinavia but Ensto Building Technology managed to increase its sales. Investments in sales continued and the sales organisation was reinforced.

The year saw major product launches to revamp basic product lines in lighting, accessories and heating, upgrading them to satisfy international demand. A new, general lighting series, AVR 320, was introduced as well as a whole new product concept, Ensto Connect, for home information solutions. In addition, the most comprehensive integrated home control system solution in the market, Ensto Smart, was launched.

Ensto Building Technology's traditional market, Scandinavia, is not expected to improve in 2005 but the business unit's net turnover across all market areas should increase.

Varying conditions, constant reliability.

ENSTO UTILITY NETWORKS

Net turnover for Ensto Utility Networks business unit came to EUR 60.0 million, a year-on-year improvement of 10.7% (net turnover in 2003: EUR 54.2 million).

Utility Networks had a staff of 445 at the end of 2004, topping the previous year's figure of 392.

Ensto Utility Networks' market developed as expected, seeing sales volumes increase in key markets, especially Russia.

Due to the war in Iraq, insecurity vis-à-vis the market situation in general, and project sales within the region in particular, affected this business unit's performance. Also, the death of sales and marketing director, Seppo Haapanen, during his business trip to Iraq had a major emotional impact.

In 2004, the Utility Networks business unit internationalised further. More than half of its profit came from outside the Nordic countries and production transfers increased staff numbers and production in countries other than Finland. Furthermore, the sales and marketing organisation was enhanced to meet the demands of internationalisation.

A new disconnecter, the SZ 24, was introduced, the Insulated Messenger Wire solution was complemented and several old products upgraded to meet international standards. The operations of the Utility Networks product development laboratory were enhanced.

In 2005, sales are expected to rise in new markets in Russia, Ukraine and other CIS countries. Sales in our traditional markets in Finland and the Nordic countries should remain steady, in line with general market developments.

ENSTO ENCLOSURES AND COMPONENTS

The business unit's net turnover for 2004 came to EUR 30.5 million. The corresponding figure for 2003 was EUR 27.5 million i.e. a rise of 11.0%.

Staff totalled 265 at the year-end, an increase of 8 compared to the previous year.

Net turnover increased on all main market areas, although there were no fundamental changes in the general market situation. Excellent volumes achieved in Western Europe promoted the business unit's internationalisation.

Sales of plastic enclosures and customised enclosure solutions were up, epitomised by the warm reception given to Ensto Clampo Pro terminals.

Price increases in plastic and metal raw materials brought new challenges, met by boosting the efficiency of our use of raw materials through the Six Sigma method.

In 2005, we forecast a rise in net turnover for Ensto Enclosures and Components in comparative terms. Our goal is to increase our market share, particularly in our key markets, while continuing our strong investment in supplying, and service provision for, customised enclosure solutions.

INVESTMENTS AND DEVELOPMENT

Gross investments for the financial period amounted to EUR 8.1 million (EUR 4.5 million). During the period, Ensto's new production and office building was completed in Keila, Estonia. Ensto is renting the premises, but the interior decoration and technical systems were part of Ensto's acquisition. Other investments comprised ICT investments, production machinery and equipment as well as the acquisition of a minority interest in our Hungarian subsidiary.

Research and development expenses totalled EUR 3.9 million (EUR 4.4 million), equating to 2.4% (2.7%) of net turnover, investment in product development continuing to rise through the Ensto Building Technology business unit.

In 2004, Ensto's brand development reached the phase at which the company's direction, values and operating model were summarised, and its goals clarified. The Ensto brand is associated with reliability, customer care and creativity, while the new Ensto brand manual with graphic instructions was published and our new visual identity applied in our communication and marketing guides. Brand work shops organised for staff continued to deal with the questions, "What we stand for and how we do things?"

In February 2004, Ensto's new Internet-based network service was introduced, serving various target groups in Ensto market areas all over the world. The new web pages aim at communicating Ensto's ambition to be the most reliable and innovative supplier of electrical systems and supplies. The pages have been published in 13 languages and their development continues.

Both Ensto Enclosures and Components and Ensto Utility Networks in Finland and Sweden introduced a new ERP system. At the end of the year, the new ERP system was introduced in Russia as well. The parent company, Ensto Oy, began using the ERP system at the beginning of 2005.

QUALITY AND ENVIRONMENT

The quality systems of Ensto's Finnish companies are ISO 9001:2000 or QS 9000/ISO 9002 certified, and their environmental management systems ISO 14001:1996 certified.

The quality systems of our Polish, Hungarian, Norwegian and British companies are ISO 9001:2000 certified, as were those of our Estonian companies as of February 2004.

With the WEEE directive (Waste from Electrical and Electronic Equipment) coming into force in 2005, all Finnish subsidiaries of Ensto to which the directive applies have joined a producer community called SELT ry, that will focus on meeting the directive's requirements.

During 2004, Ensto began a project to prepare for the entry into force of the EU RoHs (Restrictions on Hazardous Substances) directive, restricting the use of hazardous substances in electrical and electronic equipment.

The first Six Sigma project was implemented in 2004. Six Sigma is a sophisticated problem solving method, bringing order and delivery processes and product quality as close to perfection as possible.

MANAGEMENT

Jukka Koskinen was appointed Director of Ensto Utility Networks, effective from 3rd June 2004, following the resignation of his predecessor, Jacek Ratajczak. Keijo Mäkelä was appointed Director of Ensto Enclosures and Components from August 1st 2004. His predecessor, Kai Qvist, joined M-Capital Oy.

PERSONNEL

Ensto's average number of staff totalled 1,164 in 2004 (1,328), while the year-end figure was 1,195. The corresponding figure in the previous year was 1,099. At the beginning of 2004, Ensto implemented a new reward system for sales staff.

The international Ensto Council, which meets once a year, provides the Group's staff with a joint forum, and in May 2004 it convened for the 10th time, in Keila, Estonia. Ensto Council enables employees to receive information and co-operate across borders, promoting interaction between management and staff.

CORPORATE GOVERNANCE

Corporate Governance is a methodology with which Ensto is led in order to increase the company's value, taking the interests of the owners and partners into account.

The purpose of the Corporate Governance principles is to clarify the roles related to ownership and leadership of the company. Clear division of roles with their authorities and responsibilities ensures a functional decision-making process.

The principles comprise a summary of the roles, rights and responsibilities of Ensto Group's administrative bodies – the annual general meeting, the Board of Directors, the CEO and the management group. The principles are based on Ensto values: trust capital, excellent performance, partnership and encouraging creativity.

PROSPECTS

In our traditional markets in Scandinavia, construction demand is expected to remain relatively stable. Growth is forecast for all market areas in building and electricity network maintenance. We aim to be better prepared for rises in demand due to storms, such as that which struck at the turn of the year 2004/2005. Due to our restructured operations, we are confident that we can meet demand for enclosures and components. We seek sales growth in home electrification and electrical network systems, especially in Russia and other CIS countries.

We forecast slightly reduced profitability across Ensto Group during 2005, due to increased investments in our operations and product lines.

BOARD'S PROPOSAL FOR PROFIT DISTRIBUTION

According to the balance sheet on 31st December 2004, consolidated distributable funds stood at EUR 40,756,470.

The parent company's profit for the year was EUR 619,426, giving it distributable funds of EUR 22,040,627.

The Board of Directors proposes that EUR 0.69 per share, or a total of EUR 10,004,103, be paid in dividends, the remainder of distributable retained profit, EUR 12,036,524, to be retained as non-restricted equity.

ACCOUNTING PRINCIPLES

Ensto uses the euro as its accounting currency. The financial statement and consolidated financial statement are drawn up in euros. The accounts are based on historical acquisition costs, with the exception of certain appreciations allocated to buildings included in restricted equity.

Consolidated financial statement

The consolidated financial statement includes all companies in which Ensto Oy has a more than 50% direct or indirect interest.

The acquisition cost method is applied to the elimination of cross-ownership within the group. Consolidation goodwill arises when the acquisition price of shares exceeds the shareholders' equity of an acquired subsidiary at the time of acquisition. Income from subsidiaries sold during the financial period is included in the consolidated financial statements up to the moment the company was sold.

Mutual receivables and debts belonging to the Group companies, internal income and expenses and internal profits on inventories have been eliminated. Minority interest has been calculated for the subsidiaries' profits and shareholders' equity. Minority interest has also been separated from accumulated appropriations. The accumulation of appropriations is divided in the consolidated balance sheet between deferred tax liability and shareholders' equity.

The financial statements of international subsidiaries have been translated so as to correspond to Finnish accounting principles.

Items denominated in foreign currency

Finnish subsidiaries' receivables and debts denominated in foreign currency have been converted into euros at the European Central Bank's average rate on the date of the closing of the books.

The balance sheets of international group companies have been converted into euros at the European Central Bank's average rate on the date of the closing of the books, and the profit and loss accounts have been converted at the average rate for the financial period. The translation difference arising from the elimination of acquisition costs of international group companies has been included in shareholders' equity.

Derivative instruments

The Group enters into foreign currency derivative contracts to hedge against exchange rate risks arising from the receivables and debts in the balance sheet as well as from both binding and probable sales and purchase contracts. The foreign currency derivative contracts that Ensto uses include forward exchange agreements, currency options and currency swaps.

The exchange rate gain relating to hedging the Group's binding and probable purchase and sale contracts is entered as income and exchange rate losses are booked as costs over the period to maturity.

Depending on the created interest rate difference, valuation of the forward exchange agreements uses either spot or forward exchange valuation. Premiums paid on currency options paid and received are booked as income or expense during the financial period when the hedging arrangement matures.

The Group uses interest rate derivative contracts to hedge against interest risks. Interest rate derivative contracts used by Ensto include interest rate swaps and interest rate options. Payments relating to the interest rate swaps (i.e. paid or received interest) over the contract period are booked as adjusting items and interest income or interest expense (income and expenses are netted). Premiums paid on interest rate options paid or received are booked as income or expense during the financial period when the hedging arrangement matures.

Receivables

Receivables are booked according to their probable value. The portion that is likely to remain outstanding is booked as a credit loss.

Inventories

In Group companies, inventories are, in accordance with the FIFO principle, valued at a variable acquisition cost comprising the acquisition and manufacturing costs of the goods, or the probable selling price, whichever is the lowest. An individually calculated, non-marketability deduction for stocks has been applied in the Group companies. If non-marketable inventories become marketable, the non-marketability entry is revised.

Fixed assets and depreciation

Fixed assets are shown at the historical acquisition cost, with the exception of certain revaluations of buildings less planned depreciation. The planned straight-line depreciation is based on the acquisition cost and the economic life cycle of the item as follows:

- Buildings 10–30 yrs
- Machinery 5–8 yrs
- Equipment 5 yrs
- Computer hardware and software 4 yrs
- Other tangible fixed assets 10 yrs
- Consolidation difference asset 5 yrs
- No depreciation is applied to value adjustments and land areas
- Shares and holdings are booked at acquisition cost in compliance with the write-down principle.

Net sales

Turnover comprises sales revenue adjusted with annual discounts and cash discounts granted, and with exchange rate differences arising from sales receivables denominated in foreign currency. Sales freightage, credit losses and sales commissions are entered under other expenses.

Pension arrangements

Pension coverage for the employees of Group companies has been arranged through pension insurance.

Research and development costs

R&D costs accrued during the financial period are booked as annual expenses.

Extraordinary income and expenses

The extraordinary income and expenses in the profit and loss account include any significant one-time items of income or expense that are not directly linked to the company's regular business.

Taxes

The Group's taxes comprise the taxes based on the profits of the parent company and its subsidiaries and are booked on an accrual basis.

On a Group level, the deferred tax liability is calculated on the basis of items arising from periodisation and combination procedures as well as optional reserves. The change in deferred tax liability is presented under taxes in the profit and loss account and under long-term debt in the balance sheet.

Environmental aspects

Owing to the WEEE Directive and the related national legislation, as stated in the Board of Directors' Report, certain Group companies will be responsible for scrapping electrical equipment. The legislation came into force in September 2004 and the related recovery system will be adopted in August 2005. In Finland, fulfilling the obligations involved will require joining SELT, which in practice will manage waste collection and its sale to treatment plants. On the balance sheet date, no reliable estimate in euro terms was available regarding the effect of this obligation effective as of August 2005. However, our preliminary estimate suggests that this will have no material effect on the Group's financial results.

AUDITORS' REPORT

To the shareholders of Ensto Oy

We have audited the accounting, the financial statements and the corporate governance of Ensto Oy for the period 1.1.2004–31.12.2004. The financial statements, which include the report of the Board of Directors and the consolidated and parent company income statements, balance sheets and notes to the financial statements have been prepared by the Board of Directors and the Managing Director. Based on our audit we express an opinion on these financial statements and on corporate governance.

We have conducted our audit in accordance with Finnish Standards on Auditing. Those standards require, that we perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining on a test basis evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management as well as evaluating the overall financial statement presentation. The purpose of our audit of corporate governance is to examine that the members of the Board of Directors and the Managing Director have legally complied with the rules of the Companies Act.

In our opinion, the financial statements, which show a consolidated profit of 5,775 t€, have been prepared in accordance with the Accounting Act and other rules and regulations governing the preparation of financial statements. The financial statements give a true and fair view, as defined in the Accounting Act, of the consolidated and parent company's results of operations and financial position. The financial statements and consolidated financial statements can be adopted and the members of the Board of Directors and the Managing Director of the parent company can be discharged from liability for the period audited by us. The proposal by the Board of Directors regarding the result is in compliance with the Companies Act.

ENSTO WAS CHOSEN AS BEST MAIN SUPPLIER OF 2004

The Finnish Association of Logistics (LOGY) chose Ensto group as its best main supplier for 2004. LOGY has been conferring subcontractor and main supplier rewards since 1987. The criteria for the awards included hard facts and figures, such as the number of subcontractor operations, productivity and cost-effectiveness, corporate image and ability to internationalize as well as softer criteria such as desire and ability to co-operate, willingness to develop and innovativeness. The award was handed over at the Tampere Subcontractor fair on 15 September 2004.

Business operations have traditionally concentrated on keeping a company's finances, production, sales and management in order. In modern businesses, development must be continuous, balanced and applied across the board. In addition to the above, Ensto has invested in logistics and acquisitions, ICT, i.e. computer and communications technology, brand building and staff development.

Managing information and the flow of goods as well as services enables us to achieve considerable cost benefits and competitive advantages over our competitors. Ensto develops its customer and supplier partnerships continuously, acquiring the various components, equipment and technical services it requires in production and manufacturing from Finnish contractors. Ensto is also a major packaging supplier.

Ensto is continuously developing the possibilities of e-commerce. In addition to ERP systems, Ensto uses a company logistics management system and information warehousing solutions. Ensto has analyzed its supplier chains, and co-operates with universities.

ENSTO'S 30 YEARS IN MIKKELI

The Ensto Mikkeli factory's 30th anniversary was celebrated in a festive spirit on December 12th 2004, in the town's Hotelli Nuijamies, the scene of the factory's topping-out party in February 1974.

Over a hundred guests participated, greeted by the party organising committee led by the current factory manager, Ari Isomäki, after which they were welcomed by the organiser's representative. The official speech was delivered by Marjo Raitavuo. After the speeches came the food and Ensio Miettinen and Seppo Martikainen's reminiscences on old times, and a few remarks on the present. The rest of the evening consisted of a versatile program, e.g. socializing, dancing, a revue and a slide show.

ENSTO 30 YEARS IN SWEDEN

Ensto's 30 years in Sweden was celebrated by the own staff and a hundred guests on a wonderful spring evening in April 2004.

The anniversary celebrations took place in the Hågelbyhus restaurant, a few kilometres from Alby where Ensto launched its business on the Swedish market on 1 April, 1974. Alby is located 15 km south of Stockholm. The atmosphere was lively with everyone in good spirits as the guests and staff mingled before enjoying a buffet with all the trimmings. After the desserts, people could take their coffee out on to the terrace or into the garden to enjoy the spring weather while waiting for the music to "strike up" for dancing.

Towards the close of events, Seppo Martikainen, CEO and President of Ensto Oy, said a few well chosen words about Ensto's time in Sweden and its future. Seppo also said that although he would have liked to see our founder, Ensio Miettinen, taking part in the celebrations, it is now up to the new generation of the family with whom we look forward to least another 30 years of business in Sweden. The evening's celebration culminated in a magnificent firework display, and dancing continued well into the 'wee small hours'.

ENSTO 10 YEARS IN RUSSIA

The year 2004 was an important anniversary for Ensto's business in Russia. In May 1994, the Group's associate company in Russia, Ensto Elektro, was founded. Recent years have seen dynamic development and growth of turnover.

In 2003, Ensto Elektro moved into a large new office in St. Petersburg. Since that, the company has been stocked not only from Finland, but also directly from the Group's factories in Estonia and Poland. In 2004, Ensto Elektro Moscow office moved into a new office in the center of Moscow.

On May 12, the 10th anniversary celebrations began at the Energy and Electrical Engineering Exhibition in St. Petersburg, where Ensto has been a regular exhibitor. The dinner was held in the Russian Versaliya restaurant in the Baltic Star hotel which is close to the residence of the President of the Russian Federation, the Konstantinovsky palace. When the Konstantinovsky palace was restored recently, Ensto products were used in the refurbishment.

More than a hundred guests participated in the celebration, many of whom were not only clients but also good friends of Ensto Elektro people. The anniversary organising committee had arranged a small program of entertainment, competitions and dancing.

A special feature of the occasion was the presentation of a cake decorated with a map of Finland and Russia, highlighting the city of Porvoo and major Russian cities where Ensto clients are based. The evening ended with a disco with everyone enjoying the dancing. The anniversary was a great success and provided an occasion for staff and clients to meet informally and to make new business contacts.

THE OPENING OF ENSTO UKRAINE

On January 15th 2005, the opening of Ensto Ukraine office was celebrated in festive spirit, in the presidential administration's stateroom opposite the parliament building in Kiev, Ukraine. In addition to local staff, there were guests from Finland, the Ukraine Energy Ministry and representatives from other important fields.

There were many surprises for the guests during the evening and the first greeted them at the door: the stairs and hall floor were covered in oranges, in celebration of the orange revolution. Since recent political events in the Ukraine are expected to boost Ensto's business there, the evening's programme contained other references to them as well as additional surprises. Of course, there was no shortage of food, drink and dancing. The guests received plenty of presents and, as a finishing touch, each was given a bag of oranges to take home.

RENOVATION OF ENSTO HEADQUARTERS

In October 2004, the rebuilt lobby, conference rooms, show room and staff restaurant of Ensto's Porvoo headquarters were opened, with the purpose of modernizing the building's facilities and appearance.

We regard our remodeled lobby as our shop window, which is why it has been given a simple, spacious and discreet air, with the emphasis placed on only a few, carefully planned details. Large surfaces are pure white, while the moldings and floor have grey highlights. Blue has been strictly confined to details. The aim is to allow people themselves to complement and color the space, adding their own movement and life.

The simplified lobby is decorated with a few works by Finnish artists, since we have decided to promote local art in our facilities. Correspondingly, our new plant in Estonia displays Estonian art.

The new conference rooms are named after Ensto's production plants: Porvoo, Mikkeli, Keila, Tianjin and Straszyn. Their sizes vary, presenting plenty of options. One room is eminently suitable for training purposes, with ten computers linked to Ensto's intranet, while the conference rooms are equipped with state-of-the-art technology, including a wide-screen television projector, a whiteboard and Internet connections, both wireless and wired. The electrical system utilises Ensto's own EIB bus technology. In keeping with the reception area, the conference rooms' interior decoration is also modern and simple.

Ensto's solutions and products are on display for various target groups in the show room. The room's architecture and product display have been streamlined based on Ensto's trade fair concept, with brand images redolent of our business environment. The room displays a quick overview on the whole of Ensto's business and know-how.

ENSTO AND FORTUM TO CO-OPERATE OVER STAFF RECREATION SERVICE

Ensto Oy and Fortum Oil and Gas Oy have established an associated company, Kiinteistö Oy Porvoon Leporanta, providing staff recreation services. Fortum's recreational facility, Pirskeri, in Emäsalo, Porvoo, was handed over to the new company.

The company was established to promote and provide long-term recreational staff activities. Since the spring of 2004, both Fortum and Ensto staff have had the opportunity to rent cottages, an example of a new kind of co-operation between the staff of the two companies.

Pirskeri was created in 1969 and covers ten hectares. The area is mainly used during the summer, when boating and caravans provide added attractions. It has ten detached cottages, four terraced cottages attached to the main building and two saunas, as well as caravan spaces. Since February 1st 2004, the area has continued operating under the name of Leporanta and has been run by the Board of Kiinteistö Oy Porvoon Leporanta, composed of representatives from both companies.

Leporanta is intended for staff leisure time activities and year-round camping. The area can be visited on a day-to-day basis free of charge to Ensto staff, without booking. During the summer, the public sauna is open every day.

CRUISE SHIP CARNIVAL LIBERTY IN ITALY

Carnival Liberty, a cruise ship built by Fincantieri, is currently under construction at Monfalcone shipyard in Italy. Fincantieri is the world's leading builder of cruise ships. The Carnival Liberty cruise ship is the fourth sister ship in the Conquest class. As other Conquest class ships, Carnival Liberty is 290 metres long, 38 wide and 64 high, its gross tonnage is 110,000 tonnes, it has 18 decks and a maximum capacity for 3,783 passengers plus 1,170 crewmen accommodated in 2,120 cabins.

The passenger ship was launched in November 2004 and will be delivered in summer 2005 to an American ship owner Carnival Cruise Lines, the world's leading operator in the passenger cruise business. When ready to serve its customers, Carnival Liberty will be one of the largest cruise ships ever to sail to Europe. The passenger ship will also be cruising transatlantic voyages and in the Caribbean.

The electrification of the 2,120 cabins of the Carnival Liberty has been solved using EnstoNet cabin electrification systems including electrical boards and cable sets. EnstoNet cable sets and distribution blocks have also been installed in the public areas of the ship. Fincantieri has been pleased with EnstoNet system and appreciated especially its flexibility and safety, as Mr. Adriano Bado from Fincantieri's Business Unit says. According to Mr. Bado the cabin electrification system has allowed them a higher modulation of the system and thus an easier installation of it. Overall, "Ensto's availability to cooperate and develop systems such as to satisfy the demands of every player involved (owner, yard, installer) has allowed to improve the quality of board systems and, at the same time, to reduce the costs", Mr. Bado sums up.

On completion of the Carnival Liberty, the co-operation between Ensto and Fincantieri is continuing with P&O Princess Cruises' Crown Princess, the first of three sister ships of the 116,000-tonne Caribbean Princess class, which will also be equipped with EnstoNet System.

WEIHAI SUNSHINE GARDEN IN CHINA

The Weihai Sunshine Garden is located in Weihai City, in the Shandong Province of China. Weihai is a beautiful coastal city, facing Korea across the Yellow Sea. Ensto's dealer signed an agreement in 2002 with the Bank of China which is acting as the Real Estate Developer for the Weihai Sunshine Garden.

The Weihai Sunshine Garden is a complex of eight buildings, with a total construction area of 68 000 m² of which about 58 000 m² is in residential use. Its' design is based on the concept of sunshine and green sea. All the apartments face south to enjoy maximum sunshine, and nearly all of them have a sea view. Above all, the design is based on nature.

Ensto's TASH cables and ECO16 thermostats are used in the Weihai Sunshine Garden to enhance the 'intelligence' of the whole project. People who live in there can enjoy the beautiful seascape from their windows, even in winter, thanks to the warmth by which they are surrounded.

REAL ESTATE GRENADJÄREN IN SWEDEN

ÖrebroBostäder is a community owned real estate company with about 23,000 flats and 174,000 m² of commercial buildings. Örebro is a town situated in the middle of Sweden about 200 km from Stockholm with a population of 125,000 habitants.

Ensto and ÖrebroBostäder have a long history together especially in the field of light fittings. ÖrebroBostäder is a company, which always have been open and willing to use new solutions. They are e.g. familiar with Ensto Pir-luminaires since many years. Both the company and the tenants in the commercial and non-commercial buildings have benefited from the Pir-luminaire system, which saves energy and decreases lamp costs and lamp changes. Ensto Pir-system turns automatically on and off the luminaries, which brings comfort and security.

The ÖrebroBostäder building project, "Grenadjären", means 47 newly build flats divided into 4 houses with Ensto material from various product ranges. Ensto Building Technology systems are widely used: luminaries (indoor and outdoor), installation materials (System Ideal), wiring accessories (Jussi socket outlet range) and heating products.

This concept has been implemented in many new projects in Sweden: Project Markbacken (178 flats), Project Tegelmakeriet (35 flats), Project Senapen (60 flats).

NATIONAL PARK BIALOWIEZA IN POLAND

Bialowieza National Park is situated in the eastern part of Poland, at the border with Bielorrussia. The area of the Park is 10,502 ha and it is considered as the most natural, and the best preserved natural forest complex in Europe. The Bialowieza National Park was created in 1921 to protect ancient natural forests. In 1977 the Park was recognized by UNESCO as the Biosphere Reserve, and in 1979 as World Heritage Site.

This is an ideal environment for about 25,000 different types of animals. Most of them are invertebrates. The Park symbol is the European bison. The population of that beautiful animals living free in the Bialowieza Primeval Forest is almost 300. The Bialowieza natural forest means a presence of dead trees both lying and standing. Cutting trees is strictly forbidden. Average age of a tree life there is 126 years.

The priceless value of the Park made that Białystok Power Distribution Company met a big challenge to find the best solution to distribute electricity to the Forest Farm, located in the heart of the natural forest. The solution came with the cooperation with Ensto. We worked together on using MV universal cable Excel 3x10/10 15 kv for that project. In December 2003, two kilometers of the MV overhead line had been completed. For a better safety of the system we used weak links SO 135.150 and it was a pioneer's work piece, because we used them as a first in Poland.

Overhead MV universal cable Excel installation cross the natural forest very close to trees (even 0,5 m) keeping them safe for next the generations. Since 2003 it works without any breaks however few trees already fall on line. It seems to be an ideal solution turning technical advantages into environment protection. Basing on the experience of Bialowieza National Park, Białystok Power Distribution Company has built few other installations using "MV Excel cable system" offered by Ensto Pol.

REPUBLIC OF KAZAKHSTAN

Being present in Russia since many years it was a natural step for Ensto Utility Networks to branch out into the Central Asia as well as in the Republic of Kazakhstan. With its 2725 km² area and 15 million people the Republic of Kazakhstan offers a tempting market area for Ensto solutions for overhead and underground electricity networks.

The wide country has an extensive power electricity network. A big part of the network needs to be renewed and the privatization of utilities creates further demand for new equipment.

We have a long history of delivering OHL and UG solutions for the most demanding circumstances as well in hot, humid as in cold and snowy conditions and Ensto products have proved to be reliable and long lasting also in Central Asia. For some years Ensto has been building a local network of partners in Kazakhstan. Since then we have delivered Ensto products for many overhead line projects throughout Kazakhstan e.g. material for building 100 km of street lighting in Almay area.

Special emphases have been laid on customer care. This means taking the local needs into account and offering the best possible Ensto solutions for each project.

SZ 24 DISCONNECTOR – THE HIT PRODUCT OF 2004

In August 2004, a high industrial hall was built underneath overhead lines in the area covered by the Nurmijärven Sähkö Oy electricity company. For safety reasons, part of the electricity network had to be disconnected when the roof trusses were mounted, and this was easily performed using Ensto SZ 24 disconnectors and SO 235 tension clamps. SZ 24 is a 1-pole disconnector operated using live line tools such as the CT 48.64. Because Ensto's SO 235 tension clamps were used, there was no need to use tackle to mount the SZ 24 and the work was finished quickly.

Ensto's SZ 24 is an economical and practical solution for disconnecting MV overhead lines at network disconnection points, transformer substations, cable terminations and branch lines. It is an ideal solution when part of a network has to be disconnected for repairs or due to malfunctions.

Since August, the SZ 24 disconnector has been used in several locations for repairing existing lines and it has proven faster and more economical than traditional disconnectors.

ROAD TRAFFIC SYSTEM IN SWEDEN

Södra Länken is Sweden's largest road tunnel construction ever, taking seven years to complete. It was taken into use on 24 October 2004, and now it improves the lives of tens of thousands of Stockholm road users by reducing travel times from 35 minutes to 5 minutes at best.

Safety was emphasized during the road tunnel project: there is no on-coming traffic within the tunnels, the speed limit is 70 km/h, and the nearest emergency exit is never more than 75 meters away. There is also a unique feature – eight huge artworks which direct drivers to the right exit.

The safe and reliable Ensto Cubo enclosure, manufactured of stainless steel, was selected as the project's enclosure solution. Ordinary road users usually never come across the Ensto Cubo, the enclosures being located at emergency exits.

Our customer for the project was EIAB El & Industrimontage Svenska AB of Umeå and the wholesaler, Contacten, of the Storel/Sonepar Group.

JELENIA GORA HEAT AND POWER GENERATING PLANT IN POLAND

Jelenia Gora, a town in south-west Poland, is supplied with thermal and electrical energy produced by a local PEC (Heat and Power Generating Plant). Having been in operation for almost 50 years, the plant was subjected to a major modernisation project in order to meet EU environmental directives. All of its existing cast-iron panels were replaced by up-to-date solutions, the versatile and flexible Ensto Cubo P being chosen as the new panel system.

Ensto Cubo P is manufactured of polycarbonate, and its protection class is IP65, making it an excellent choice for the rugged conditions of the dusty, hot and humid plant environment. The customer appreciated easy machining of the enclosures and, in particular, the Ensto Cubo P system's huge flexibility, it being suitable both for large assemblies of several modules and smaller control units.
